# 1 Module Index

# 1.1 Modules

Here is a list of all modules:	
Device API	3
Host API	35
Error handling	36
Device context	37
Pipelines	42
Modules	44
Program groups	46
Launches	48
Acceleration structures	50
Denoiser	55
Types	61
Function Table	96
Utilities	97
2.1 Class List	
Here are the classes, structs, unions and interfaces with brief descriptions:	
OptixAabb  AABB inputs	108
OptixAccelBufferSizes Struct for querying builder allocation requirements	109
OptixAccelBuildOptions  Build options for acceleration structures	110
OptixAccelEmitDesc Specifies a type and output destination for emitted post-build properties	110
OptixAccelRelocationInfo Used to store information related to relocation of acceleration structures	111
OptixBuildInput Build inputs	111
OptixBuildInputCurveArray Curve inputs	112
OptixBuildInputCustomPrimitiveArray Custom primitive inputs	115

2 2.1 Class List

OptixBuildInputInstanceArray Instance and instance pointer inputs	116
OptixBuildInputTriangleArray Triangle inputs	117
OptixBuiltinISOptions  Specifies the options for retrieving an intersection program for a built-in primitive type. The primitive type must not be OPTIX_PRIMITIVE_TYPE_CUSTOM	119
OptixDenoiserOptions Options used by the denoiser	120
OptixDenoiserParams  Various parameters used by the denoiser	120
OptixDenoiserSizes Various sizes related to the denoiser	121
OptixDeviceContextOptions Parameters used for optixDeviceContextCreate()	122
OptixFunctionTable The function table containing all API functions	123
OptixImage2D Image descriptor used by the denoiser	130
OptixInstance Instances	131
OptixMatrixMotionTransform  Represents a matrix motion transformation	132
OptixModuleCompileBoundValueEntry Struct for specifying specializations for pipelineParams as specified in OptixPipelineCompileC 133	Options::pipelineLaun
OptixModuleCompileOptions Compilation options for module	134
OptixMotionOptions  Motion options	135
OptixPipelineCompileOptions  Compilation options for all modules of a pipeline	136
OptixPipelineLinkOptions Link options for a pipeline	137
OptixProgramGroupCallables Program group representing callables	138
OptixProgramGroupDesc  Descriptor for program groups	139
OptixProgramGroupHitgroup Program group representing the hitgroup	140

OptixProgramGroupOptions Program group options	141
OptixProgramGroupSingleModule Program group representing a single module	141
OptixShaderBindingTable Describes the shader binding table (SBT)	142
OptixSRTData Represents an SRT transformation	144
OptixSRTMotionTransform Represents an SRT motion transformation	145
OptixStackSizes  Describes the stack size requirements of a program group	147
OptixStaticTransform Static transform	148
OptixUtilDenoiserImageTile Tile definition	148

# 3 Module Documentation

## 3.1 Device API

### **Functions**

### 3.1.1 Detailed Description

OptiX Device API.

#### 3.1.2 Function Documentation

Creates a call to the continuation callable program at the specified SBT entry.

This will call the program that was specified in the

OptixProgramGroupCallables::entryFunctionNameCC in the module specified by

OptixProgramGroupCallables::moduleCC. The address of the SBT entry is calculated by

OptixShaderBindingTable::callablesRecordBase + (

OptixShaderBindingTable::callablesRecordStrideInBytes \* sbtIndex ). As opposed to direct callable programs, continuation callable programs are allowed to call optixTrace recursively.

Behavior is undefined if there is no continuation callable program at the specified SBT entry.

Behavior is undefined if the number of arguments that are being passed in does not match the number of parameters expected by the program that is called. In that case an exception of type OPTIX\_EXCEPTION\_CODE\_CALLABLE\_PARAMETER\_MISMATCH will be thrown if OPTIX\_EXCEPTION\_FLAG\_DEBUG was specified for the OptixPipelineCompileOptions::exceptionFlags.

## **Parameters**

in	sbtIndex	The offset of the SBT entry of the continuation callable program to call relative to OptixShaderBindingTable::callablesRecordBase.
in	args	The arguments to pass to the continuation callable program.

# 

Creates a call to the direct callable program at the specified SBT entry.

This will call the program that was specified in the

OptixProgramGroupCallables::entryFunctionNameDC in the module specified by

OptixProgramGroupCallables::moduleDC. The address of the SBT entry is calculated by

OptixShaderBindingTable::callablesRecordBase + (

OptixShaderBindingTable::callablesRecordStrideInBytes \* sbtIndex ).

Behavior is undefined if there is no direct callable program at the specified SBT entry.

Behavior is undefined if the number of arguments that are being passed in does not match the number of parameters expected by the program that is called. In that case an exception of type OPTIX\_EXCEPTION\_CODE\_CALLABLE\_PARAMETER\_MISMATCH will be thrown if OPTIX\_EXCEPTION\_FLAG\_DEBUG was specified for the OptixPipelineCompileOptions::exceptionFlags.

### **Parameters**

in	sbtIndex	The offset of the SBT entry of the direct callable program to call relative to OptixShaderBindingTable::callablesRecordBase.
in	args	The arguments to pass to the direct callable program.

3.1.2.3	static _	_forceinline	_device	unsigned int optixGetAttribute_0 (	)	[static]
Returns	the attrib	ute at slot 0.				
3.1.2.4	static _	_forceinline	_device	unsigned int optixGetAttribute_1 (	)	[static]
Returns	the attrib	ute at slot 1.				
3.1.2.5	static _	_forceinline	_device	unsigned int optixGetAttribute_2 (	)	[static]
Returns	the attrib	ute at slot 2.				
3.1.2.6	static _	_forceinline	_device	unsigned int optixGetAttribute_3 (	)	[static]
Returns	the attrib	ute at slot 3.				
3.1.2.7	static _	_forceinline	_device	unsigned int optixGetAttribute_4 (	)	[static]
Returns	the attrib	ute at slot 4.				
3.1.2.8	static _	_forceinline	_device	unsigned int optixGetAttribute_5 (	)	[static]
Returns	the attrib	ute at slot 5.				

3.1.2.9 staticforceinlinedevice unsigned int optixGetAttribute_6 ( ) [static]
Returns the attribute at slot 6.
3.1.2.10 staticforceinlinedevice unsigned int optixGetAttribute_7 ( ) [static]
Returns the attribute at slot 7.
3.1.2.11 staticforceinlinedevice void optixGetCubicBSplineVertexData (
Return the object space curve control vertex data of a cubic BSpline curve in a Geometry Acceleration Structure (GAS) at a given motion time.
$\label{eq:data} \begin{split} \text{data[i]} &= \{x,y,z,w\} \text{ with } \{x,y,z\} \text{ the position and w the radius of control vertex i. If motion is disabled via } \\ \text{OptixPipelineCompileOptions::usesMotionBlur, or the GAS does not contain motion, the time } \\ \text{parameter is ignored.} \end{split}$
3.1.2.12 staticforceinlinedevice float optixGetCurveParameter( ) [static]
Convenience function that returns the curve parameter.
When using OptixBuildInputCurveArray objects, during intersection the curve parameter is stored into the first attribute register.
3.1.2.13 staticforceinlinedevice int optixGetExceptionCode ( ) [static]
Returns the exception code.
Only available in EX.
3.1.2.14 staticforceinlinedevice unsigned int optixGetExceptionDetail_0 ( ) [static]
Returns the 32-bit exception detail at slot 0.
The behavior is undefined if the exception is not a user exception, or the used overload optixThrowException() did not provide the queried exception detail.
Only available in EX.
3.1.2.15 staticforceinlinedevice unsigned int optixGetExceptionDetail_1 ( ) [static]

NVIDIA OptiX 7.2 API

Returns the 32-bit exception detail at slot 1.

```
See Also
     optixGetExceptionDetail_0()
3.1.2.16 static __forceinline_ __device__ unsigned int optixGetExceptionDetail_2 ( )
          [static]
Returns the 32-bit exception detail at slot 2.
See Also
     optixGetExceptionDetail_0()
3.1.2.17 static __forceinline_ __device__ unsigned int optixGetExceptionDetail_3 ( )
          [static]
Returns the 32-bit exception detail at slot 3.
See Also
     optixGetExceptionDetail_0()
3.1.2.18 static __forceinline_ __device__ unsigned int optixGetExceptionDetail_4 ( )
          [static]
Returns the 32-bit exception detail at slot 4.
See Also
     optixGetExceptionDetail_0()
3.1.2.19 static __forceinline_ __device__ unsigned int optixGetExceptionDetail_5 ( )
          [static]
Returns the 32-bit exception detail at slot 5.
See Also
     optixGetExceptionDetail 0()
3.1.2.20 static __forceinline_ __device__ unsigned int optixGetExceptionDetail_6 ( )
          [static]
Returns the 32-bit exception detail at slot 6.
See Also
     optixGetExceptionDetail_0()
```

# 3.1.2.21 static \_\_forceinline\_ \_\_device\_\_ unsigned int optixGetExceptionDetail\_7 ( ) [static]

Returns the 32-bit exception detail at slot 7.

See Also

optixGetExceptionDetail\_0()

# 3.1.2.22 static \_\_forceinline\_\_ \_device\_\_ OptixInvalidRayExceptionDetails optixGetExceptionInvalidRay ( ) [static]

Returns the invalid ray for exceptions with exception code OPTIX\_EXCEPTION\_CODE\_INVALID\_RAY. Exceptions of type OPTIX\_EXCEPTION\_CODE\_INVALID\_RAY are thrown when one or more values that were passed into optixTrace are either inf or nan.

OptixInvalidRayExceptionDetails::rayTime will always be 0 if
OptixPipelineCompileOptions::usesMotionBlur is 0. Values in the returned

OptixPipelineCompileOptions::usesMotionBlur is 0. Values in the returned struct are all zero for all other exception codes.

Only available in EX.

# 3.1.2.23 static \_\_forceinline\_\_ \_device\_\_ int optixGetExceptionInvalidSbtOffset( ) [static]

Returns the invalid sbt offset for exceptions with exception code OPTIX\_EXCEPTION\_CODE\_TRAVERSAL\_INVALID\_MISS\_SBT and OPTIX\_EXCEPTION\_CODE\_TRAVERSAL\_INVALID\_HIT\_SBT.

Returns zero for all other exception codes.

Only available in EX.

# 3.1.2.24 static \_\_forceinline\_\_ \_device\_\_ OptixTraversableHandle optixGetExceptionInvalidTraversable ( ) [static]

Returns the invalid traversable handle for exceptions with exception code OPTIX\_EXCEPTION\_CODE\_TRAVERSAL\_INVALID\_TRAVERSABLE.

Returns zero for all other exception codes.

Only available in EX.

## 3.1.2.25 static \_\_forceinline\_\_ \_device\_\_ char\* optixGetExceptionLineInfo( ) [static]

Returns a string that includes information about the source location that caused the current exception.

The source location is only available for exceptions of type

OPTIX\_EXCEPTION\_CODE\_CALLABLE\_PARAMETER\_MISMATCH,

OPTIX EXCEPTION CODE UNSUPPORTED PRIMITIVE TYPE,

OPTIX\_EXCEPTION\_CODE\_INVALID\_RAY, and for user exceptions. Line information needs to be present in the input PTX and OptixModuleCompileOptions::debugLevel may not be set to OPTIX COMPILE DEBUG LEVEL NONE.

Returns a NULL pointer if no line information is available.

Only available in EX.

# 3.1.2.26 static \_\_forceinline\_ \_\_device\_\_ OptixParameterMismatchExceptionDetails optixGetExceptionParameterMismatch( ) [static]

Returns information about an exception with code OPTIX\_EXCEPTION\_CODE\_CALLABLE\_PARAMETER\_MISMATCH.

Exceptions of type OPTIX\_EXCEPTION\_CODE\_CALLABLE\_PARAMETER\_MISMATCH are called when the number of arguments that were passed into a call to optixDirectCall or optixContinuationCall does not match the number of parameters of the callable that is called. Note that the parameters are packed by OptiX into individual 32 bit values, so the number of expected and passed values may not correspond to the number of arguments passed into optixDirectCall or optixContinuationCall.

Values in the returned struct are all zero for all other exception codes.

Only available in EX.

3.1.2.27 static \_\_forceinline\_\_ \_device\_\_ unsigned int optixGetGASMotionStepCount (
OptixTraversableHandle gas ) [static]

Returns the number of motion steps of a GAS (see OptixMotionOptions)

Returns the motion begin time of a GAS (see OptixMotionOptions)

Returns the motion end time of a GAS (see OptixMotionOptions)

3.1.2.30 static \_\_forceinline\_\_ \_device\_\_ OptixTraversableHandle optixGetGASTraversableHandle() [static]

Returns the traversable handle for the Geometry Acceleration Structure (GAS) containing the current hit. May be called from IS, AH and CH.

3.1.2.31 static \_\_forceinline\_\_ \_device\_\_ unsigned int optixGetHitKind ( ) [static]

Returns the 8 bit hit kind associated with the current hit.

Use optixGetPrimitiveType() to interpret the hit kind. For custom intersections (primitive type OPTIX\_PRIMITIVE\_TYPE\_CUSTOM), this is the 7-bit hitKind passed to optixReportIntersection(). Hit kinds greater than 127 are reserved for built-in primitives.

Available only in AH and CH.

3.1.2.32 static forceinline device unsigned int optixGetInstanceId ( ) [static]

Returns the OptixInstance::instanceId of the instance within the top level acceleration structure associated with the current intersection.

When building an acceleration structure using OptixBuildInputInstanceArray each OptixInstance has a user supplied instanceId. OptixInstance objects reference another acceleration structure. During

traversal the acceleration structures are visited top down. In the IS and AH programs the OptixInstance::instanceId corresponding to the most recently visited OptixInstance is returned when calling optixGetInstanceId(). In CH optixGetInstanceId() returns the OptixInstance::instanceId when the hit was recorded with optixReportIntersection. In the case where there is no OptixInstance visited, optixGetInstanceId returns  $\sim$ 0u

# 3.1.2.33 static \_\_forceinline\_\_ \_device\_\_ unsigned int optixGetInstanceIdFromHandle ( OptixTraversableHandle handle ) [static]

Returns instanceld from an OptixInstance traversable.

Returns 0 if the traversable handle does not reference an OptixInstance.

```
3.1.2.34 static __forceinline__ _device__ unsigned int optixGetInstanceIndex ( ) [static]
```

Returns the zero-based index of the instance within its instance acceleration structure associated with the current intersection.

In the IS and AH programs the index corresponding to the most recently visited OptixInstance is returned when calling optixGetInstanceIndex(). In CH optixGetInstanceIndex() returns the index when the hit was recorded with optixReportIntersection. In the case where there is no OptixInstance visited, optixGetInstanceIndex returns 0

# 

Returns world-to-object transform from an OptixInstance traversable.

Returns 0 if the traversable handle does not reference an OptixInstance.

```
3.1.2.36 static __forceinline__ __device__ const float4* optixGetInstanceTransformFromHandle (

OptixTraversableHandle handle ) [static]
```

Returns object-to-world transform from an OptixInstance traversable.

Returns 0 if the traversable handle does not reference an OptixInstance.

```
3.1.2.37 static __forceinline__ _device__ uint3 optixGetLaunchDimensions ( ) [static]
```

Available in any program, it returns the dimensions of the current launch specified by optixLaunch on the host.

```
3.1.2.38 static forceinline device uint3 optixGetLaunchIndex ( ) [static]
```

Available in any program, it returns the current launch index within the launch dimensions specified by optixLaunch on the host.

The raygen program is typically only launched once per launch index.

3.1.2.39 static \_\_forceinline\_\_ \_device\_\_ void optixGetLinearCurveVertexData (
OptixTraversableHandle gas,

unsigned int *primIdx*, unsigned int *sbtGASIndex*, float *time*, float4 *data[2]* ) [static]

Return the object space curve control vertex data of a linear curve in a Geometry Acceleration Structure (GAS) at a given motion time.

data[i] =  $\{x,y,z,w\}$  with  $\{x,y,z\}$  the position and w the radius of control vertex i. If motion is disabled via OptixPipelineCompileOptions::usesMotionBlur, or the GAS does not contain motion, the time parameter is ignored.

3.1.2.40 static \_\_forceinline\_\_ \_\_device\_\_ const OptixMatrixMotionTransform\*
 optixGetMatrixMotionTransformFromHandle (
 OptixTraversableHandle handle ) [static]

Returns a pointer to a OptixMatrixMotionTransform from its traversable handle.

Returns 0 if the traversable is not of type OPTIX TRANSFORM TYPE MATRIX MOTION TRANSFORM.

3.1.2.41 static \_\_forceinline\_ \_\_device\_\_ float3 optixGetObjectRayDirection ( ) [static]

Returns the current object space ray direction based on the current transform stack.

Only available in IS and AH.

3.1.2.42 static \_\_forceinline\_\_ \_device\_\_ float3 optixGetObjectRayOrigin( ) [static]

Returns the current object space ray origin based on the current transform stack.

Only available in IS and AH.

Returns the object-to-world transformation matrix resulting from the current active transformation list.

The cost of this function may be proportional to the size of the transformation list.

3.1.2.44 static \_\_forceinline\_ \_\_device\_ unsigned int optixGetPayload\_0 ( ) [static]

Reads the 32-bit payload value at slot 0.

3.1.2.45 static \_\_forceinline\_\_ \_device\_\_ unsigned int optixGetPayload\_1 ( ) [static]

Reads the 32-bit payload value at slot 1.

3.1.2.46 static \_\_forceinline\_ \_\_device\_\_ unsigned int optixGetPayload\_2 ( ) [static]

Reads the 32-bit payload value at slot 2.

```
3.1.2.47 static __forceinline__ _device__ unsigned int optixGetPayload_3 ( ) [static]
Reads the 32-bit payload value at slot 3.
3.1.2.48 static __forceinline_ _device_ unsigned int optixGetPayload_4 ( ) [static]
Reads the 32-bit payload value at slot 4.
3.1.2.49 static __forceinline_ __device__ unsigned int optixGetPayload_5 ( ) [static]
Reads the 32-bit payload value at slot 5.
3.1.2.50 static forceinline device unsigned int optixGetPayload 6 ( ) [static]
Reads the 32-bit payload value at slot 6.
3.1.2.51 static forceinline device unsigned int optixGetPayload 7() [static]
Reads the 32-bit payload value at slot 7.
3.1.2.52 static __forceinline_ _ _device_ unsigned int optixGetPrimitiveIndex ( ) [static]
For a given OptixBuildInputTriangleArray the number of primitives is defined as
"(OptixBuildInputTriangleArray::indexBuffer == 0) ? OptixBuildInputTriangleArray::numVertices/3:
OptixBuildInputTriangleArray::numIndexTriplets;". For a given OptixBuildInputCustomPrimitiveArray the
number of primitives is defined as numAabbs.
The primitive index returns the index into the array of primitives plus the primitiveIndexOffset.
In IS and AH this corresponds to the currently intersected primitive. In CH this corresponds to the
primitive index of the closest intersected primitive.
3.1.2.53 static __forceinline__ __device__ OptixPrimitiveType optixGetPrimitiveType (
            unsigned int hitKind ) [static]
Function interpreting the result of optixGetHitKind().
3.1.2.54 static __forceinline__ _device__ OptixPrimitiveType optixGetPrimitiveType ( )
          [static]
Function interpreting the hit kind associated with the current optixReportIntersection.
3.1.2.55 static __forceinline__ _device__ void optixGetQuadraticBSplineVertexData (
            OptixTraversableHandle gas,
            unsigned int primldx,
            unsigned int sbtGASIndex,
            float time.
            float4 data[3] ) [static]
```

Return the object space curve control vertex data of a quadratic BSpline curve in a Geometry Acceleration Structure (GAS) at a given motion time.

 $data[i] = \{x,y,z,w\}$  with  $\{x,y,z\}$  the position and w the radius of control vertex i. If motion is disabled via OptixPipelineCompileOptions::usesMotionBlur, or the GAS does not contain motion, the time parameter is ignored.

3.1.2.56 static \_\_forceinline\_\_ \_device\_\_ unsigned int optixGetRayFlags ( ) [static]

Returns the rayFlags passed into optixTrace.

Only available in IS, AH, CH, MS

3.1.2.57 static \_\_forceinline\_\_ \_device\_\_ float optixGetRayTime ( ) [static]

Returns the rayTime passed into optixTrace.

Will return 0 if motion is disabled. Only available in IS, AH, CH, MS

3.1.2.58 static \_\_forceinline\_\_ \_device\_\_ float optixGetRayTmax ( ) [static]

In IS and CH returns the current smallest reported hitT or the tmax passed into optixTrace if no hit has been reported In AH returns the hitT value as passed in to optixReportIntersection In MS returns the tmax passed into optixTrace Only available in IS, AH, CH, MS.

3.1.2.59 static \_\_forceinline\_\_ \_device\_\_ float optixGetRayTmin() [static]

Returns the tmin passed into optixTrace.

Only available in IS, AH, CH, MS

3.1.2.60 static \_\_forceinline\_ \_\_device\_\_ unsigned int optixGetRayVisibilityMask ( ) [static]

Returns the visibilityMask passed into optixTrace.

Only available in IS, AH, CH, MS

3.1.2.61 static \_\_forceinline\_\_ \_\_device\_\_ CUdeviceptr optixGetSbtDataPointer( ) [static]

Returns the generic memory space pointer to the data region (past the header) of the currently active SBT record corresponding to the current program.

3.1.2.62 static \_\_forceinline\_\_ \_device\_\_ unsigned int optixGetSbtGASIndex ( ) [static]

Returns the Sbt GAS index of the primitive associated with the current intersection.

In IS and AH this corresponds to the currently intersected primitive. In CH this corresponds to the Sbt GAS index of the closest intersected primitive. In EX with exception code OPTIX\_EXCEPTION\_CODE\_TRAVERSAL\_INVALID\_HIT\_SBT corresponds to the sbt index within the

hit GAS. Returns zero for all other exceptions.

Returns a pointer to a OptixSRTMotionTransform from its traversable handle.

Returns 0 if the traversable is not of type OPTIX\_TRANSFORM\_TYPE\_SRT\_MOTION\_TRANSFORM.

Returns a pointer to a OptixStaticTransform from its traversable handle.

Returns 0 if the traversable is not of type OPTIX TRANSFORM TYPE STATIC TRANSFORM.

Returns the traversable handle for a transform on the current transform list.

Only available in IS, AH, CH, EX

```
3.1.2.66 static __forceinline__ _device__ unsigned int optixGetTransformListSize ( ) [static]
```

Returns the number of transforms on the current transform list.

Only available in IS, AH, CH, EX

Returns the transform type of a traversable handle from a transform list.

```
3.1.2.68 static __forceinline__ _device__ float2 optixGetTriangleBarycentrics( ) [static]
```

Convenience function that returns the first two attributes as floats.

When using OptixBuildInputTriangleArray objects, during intersection the barycentric coordinates are stored into the first two attribute registers.

Return the object space triangle vertex positions of a given triangle in a Geometry Acceleration Structure (GAS) at a given motion time.

If motion is disabled via OptixPipelineCompileOptions::usesMotionBlur, or the GAS does not contain motion, the time parameter is ignored.

3.1 Device API 3.1.2.70 static \_\_forceinline\_ \_\_device\_\_ float3 optixGetWorldRayDirection( ) [static] Returns the rayDirection passed into optixTrace. May be more expensive to call in IS and AH than their object space counterparts, so effort should be made to use the object space ray in those programs. Only available in IS, AH, CH, MS 3.1.2.71 static \_\_forceinline\_ \_\_device\_\_ float3 optixGetWorldRayOrigin( ) [static] Returns the rayOrigin passed into optixTrace. May be more expensive to call in IS and AH than their object space counterparts, so effort should be made to use the object space ray in those programs. Only available in IS, AH, CH, MS 3.1.2.72 static \_\_forceinline\_\_ \_\_device\_\_ void optixGetWorldToObjectTransformMatrix ( float m[12] ) [static] Returns the world-to-object transformation matrix resulting from the current active transformation list. The cost of this function may be proportional to the size of the transformation list. 3.1.2.73 static \_\_forceinline\_ \_\_device\_\_ void optixIgnoreIntersection( ) [static] Discards the hit, and returns control to the calling optixReportIntersection or built-in intersection routine. Available only in AH. 3.1.2.74 static \_\_forceinline\_\_ \_device\_\_ bool optixIsBackFaceHit ( unsigned int hitKind ) [static] Function interpreting the result of optixGetHitKind(). 3.1.2.75 static \_\_forceinline\_\_ \_device\_\_ bool optixIsBackFaceHit( ) [static] Function interpreting the hit kind associated with the current optixReportIntersection. 3.1.2.76 static \_\_forceinline\_\_ \_device\_\_ bool optixlsFrontFaceHit ( unsigned int hitKind ) [static] Function interpreting the result of optixGetHitKind(). 3.1.2.77 static forceinline device bool optixIsFrontFaceHit() [static] Function interpreting the hit kind associated with the current optixReportIntersection. 3.1.2.78 static \_\_forceinline\_\_ \_device\_\_ bool optixIsTriangleBackFaceHit ( ) [static] Convenience function interpreting the result of optixGetHitKind(). 3.1.2.79 static \_\_forceinline\_ \_\_device\_\_ bool optixIsTriangleFrontFaceHit( ) [static]

Convenience function interpreting the result of optixGetHitKind().

21

```
3.1.2.80 static __forceinline__ _device__ bool optixIsTriangleHit ( ) [static]
```

Convenience function interpreting the result of optixGetHitKind().

Reports an intersections (overload without attributes).

If optixGetRayTmin() <= hitT <= optixGetRayTmax(), the any hit program associated with this intersection program (via the SBT entry) is called. The AH program can do one of three things:

- 1. call optixIgnoreIntersection no hit is recorded, optixReportIntersection returns false
- 2. call optixTerminateRay hit is recorded, optixReportIntersection does not return, no further traversal occurs, and the associated closest hit program is called
- 3. neither hit is recorded, optixReportIntersection returns true hitKind Only the 7 least significant bits should be written [0..127]. Any values above 127 are reserved for built in intersection. The value can be queried with optixGetHitKind() in AH and CH.

The attributes specified with a0..a7 are available in the AH and CH programs. Note that the attributes available in the CH program correspond to the closest recorded intersection. The number of attributes in registers and memory can be configured in the pipeline.

#### **Parameters**

in	hitT	
in	hitKind	

Reports an intersection (overload with 1 attribute register).

See Also

optixReportIntersection(float,unsigned int)

Reports an intersection (overload with 2 attribute registers).

            unsigned int p ) [static]
Writes the 32-bit payload value at slot 7.
3.1.2.98 static __forceinline__ _device__ void optixTerminateRay ( ) [static]
Record the hit, stops traversal, and proceeds to CH.
Available only in AH.
3.1.2.99 static forceinline device void optixThrowException (
```

# int exceptionCode ) [static]

Throws a user exception with the given exception code (overload without exception details).

The exception code must be in the range from 0 to 2<sup>30</sup> - 1. Up to 8 optional exception details can be passed. They can be queried in the EX program using optixGetExceptionDetail\_0() to ...\_8().

The exception details must not be used to encode pointers to the stack since the current stack is not preserved in the EX program.

Not available in EX.

#### **Parameters**

```
in exceptionCode The exception code to be thrown.
```

Throws a user exception with the given exception code (overload with 1 exception detail).

See Also

```
optixThrowException(int)
```

Throws a user exception with the given exception code (overload with 2 exception details).

- const char \* optixGetErrorString (OptixResult result)

## 3.3.1 Detailed Description

#### 3.3.2 Function Documentation

# 3.3.2.1 const char\* optixGetErrorName ( OptixResult result )

Returns a string containing the name of an error code in the enum.

Output is a string representation of the enum. For example "OPTIX\_SUCCESS" for OPTIX\_SUCCESS and "OPTIX\_ERROR\_INVALID\_VALUE" for OPTIX\_ERROR\_INVALID\_VALUE.

If the error code is not recognized, "Unrecognized OptixResult code" is returned.

#### **Parameters**

in	result	OptixResult enum to generate string name for
----	--------	--

# See Also

optixGetErrorString

# 3.3.2.2 const char\* optixGetErrorString ( OptixResult result )

Returns the description string for an error code.

Output is a string description of the enum. For example "Success" for OPTIX\_SUCCESS and "Invalid value" for OPTIX\_ERROR\_INVALID\_VALUE.

If the error code is not recognized, "Unrecognized OptixResult code" is returned.

#### **Parameters**

in	result	OptixResult enum to generate string description for

3.4 Device context 37

## 3.4 Device context

#### **Functions**

- OptixResult optixDeviceContextCreate (CUcontext fromContext, const OptixDeviceContextOptions \*options, OptixDeviceContext \*context)
- OptixResult optixDeviceContextDestroy (OptixDeviceContext context)
- OptixResult optixDeviceContextGetProperty (OptixDeviceContext context, OptixDeviceProperty property, void \*value, size\_t sizeInBytes)
- OptixResult optixDeviceContextSetLogCallback (OptixDeviceContext context, OptixLogCallback callbackFunction, void \*callbackData, unsigned int callbackLevel)
- OptixResult optixDeviceContextSetCacheEnabled (OptixDeviceContext context, int enabled)
- OptixResult optixDeviceContextSetCacheLocation (OptixDeviceContext context, const char \*location)
- OptixResult optixDeviceContextSetCacheDatabaseSizes (OptixDeviceContext context, size\_t lowWaterMark, size\_t highWaterMark)
- OptixResult optixDeviceContextGetCacheEnabled (OptixDeviceContext context, int \*enabled)
- OptixResult optixDeviceContextGetCacheLocation (OptixDeviceContext context, char \*location, size\_t locationSize)
- OptixResult optixDeviceContextGetCacheDatabaseSizes (OptixDeviceContext context, size\_t \*lowWaterMark, size\_t \*highWaterMark)

### 3.4.1 Detailed Description

# 3.4.2 Function Documentation

#### 3.4.2.1 OptixResult optixDeviceContextCreate (

CUcontext fromContext,
const OptixDeviceContextOptions \* options,
OptixDeviceContext \* context )

Create a device context associated with the CUDA context specified with 'fromContext'.

If zero is specified for 'fromContext', OptiX will use the current CUDA context. The CUDA context should be initialized before calling optixDeviceContextCreate.

# **Parameters**

in	fromContext	
in	options	
out	context	

#### Returns

- OPTIX\_ERROR\_CUDA\_NOT\_INITIALIZED If using zero for 'fromContext' and CUDA has
  not been initialized yet on the calling thread.
- OPTIX ERROR CUDA ERROR CUDA operation failed.

38 3.4 Device context

- OPTIX\_ERROR\_HOST\_OUT\_OF\_MEMORY Heap allocation failed.
- OPTIX\_ERROR\_INTERNAL\_ERROR Internal error

# 3.4.2.2 OptixResult optixDeviceContextDestroy ( OptixDeviceContext context )

Destroys all CPU and GPU state associated with the device.

It will attempt to block on CUDA streams that have launch work outstanding.

Any API objects, such as OptixModule and OptixPipeline, not already destroyed will be destroyed.

Thread safety: A device context must not be destroyed while it is still in use by concurrent API calls in other threads.

# 3.4.2.3 OptixResult optixDeviceContextGetCacheDatabaseSizes (

OptixDeviceContext context,

size\_t \* lowWaterMark,

size t \* highWaterMark )

Returns the low and high water marks for disk cache garbage collection.

#### **Parameters**

in	context	the device context
out	lowWaterMark	the low water mark
out	highWaterMark	the high water mark

# ${\bf 3.4.2.4}\quad {\bf Optix Result\ optix Device Context Get Cache Enabled\ (}$

OptixDeviceContext context,

int \* enabled )

Indicates whether the disk cache is enabled or disabled.

# **Parameters**

in	context	the device context
out	enabled	1 if enabled, 0 if disabled

# 3.4.2.5 OptixResult optixDeviceContextGetCacheLocation (

OptixDeviceContext context,

char \* location,

size t locationSize )

Returns the location of the disk cache.

3.4 Device context 39

#### **Parameters**

in	context	the device context
out	location	directory of disk cache, null terminated if location Size $> 0$
in	locationSize	locationSize

# 3.4.2.6 OptixResult optixDeviceContextGetProperty (

OptixDeviceContext context,
OptixDeviceProperty property,
void \* value,
size\_t sizeInBytes )

Query properties of a device context.

#### **Parameters**

in	context	the device context to query the property for
in	property	the property to query
out	value	pointer to the returned
in	sizeInBytes	size of output

# 3.4.2.7 OptixResult optixDeviceContextSetCacheDatabaseSizes (

OptixDeviceContext context, size\_t lowWaterMark, size\_t highWaterMark)

Sets the low and high water marks for disk cache garbage collection.

Garbage collection is triggered when a new entry is written to the cache and the current cache data size plus the size of the cache entry that is about to be inserted exceeds the high water mark. Garbage collection proceeds until the size reaches the low water mark. Garbage collection will always free enough space to insert the new entry without exceeding the low water mark. Setting either limit to zero will disable garbage collection. An error will be returned if both limits are non-zero and the high water mark is smaller than the low water mark.

Note that garbage collection is performed only on writes to the disk cache. No garbage collection is triggered on disk cache initialization or immediately when calling this function, but on subsequent inserting of data into the database.

If the size of a compiled module exceeds the value configured for the high water mark and garbage collection is enabled, the module will not be added to the cache and a warning will be added to the log.

in	context	the device context
in	lowWaterMark	the low water mark

40 3.4 Device context

#### **Parameters**

in highWate	Mark the high water mark
-------------	--------------------------

# 

Enables or disables the disk cache.

If caching was previously disabled, enabling it will attempt to initialize the disk cache database using the currently configured cache location. An error will be returned if initialization fails.

Note that no in-memory cache is used, so no caching behavior will be observed if the disk cache is disabled.

#### **Parameters**

in	context	the device context
in	enabled	1 to enabled, 0 to disable

# 

Sets the location of the disk cache.

The location is specified by a directory. This directory should not be used for other purposes and will be created if it does not exist. An error will be returned if is not possible to create the disk cache at the specified location for any reason (e.g., the path is invalid or the directory is not writable). Caching will be disabled if the disk cache cannot be initialized in the new location. If caching is disabled, no error will be returned until caching is enabled. If the disk cache is located on a network file share, behavior is undefined.

The location of the disk cache can be overridden with the environment variable OPTIX\_CACHE\_PATH. The environment variable takes precedence over this setting.

The default location depends on the operating system:

- Windows: LOCALAPPDATA%\NVIDIA\OptixCache
- Linux: /var/tmp/OptixCache\_<username> (or /tmp/OptixCache\_<username> if the first choice is not usable), the underscore and username suffix are omitted if the username cannot be obtained
- MacOS X: /Library/Application Support/NVIDIA/OptixCache

in	context	the device context
in	location	directory of disk cache

3.4 Device context 41

# 3.4.2.10 OptixResult optixDeviceContextSetLogCallback (

OptixDeviceContext context,

OptixLogCallback callbackFunction,

void \* callbackData,

unsigned int callbackLevel )

Sets the current log callback method.

See OptixLogCallback for more details.

Thread safety: It is guaranteed that the callback itself (callbackFunction and callbackData) are updated atomically. It is not guaranteed that the callback itself (callbackFunction and callbackData) and the callbackLevel are updated atomically. It is unspecified when concurrent API calls using the same context start to make use of the new callback method.

in	context	the device context
in	callbackFunction	the callback function to call
in	callbackData	pointer to data passed to callback function while invoking it
in	callbackLevel	callback level

42 3.5 Pipelines

# 3.5 Pipelines

#### **Functions**

- OptixResult optixPipelineCreate (OptixDeviceContext context, const
   OptixPipelineCompileOptions \*pipelineCompileOptions, const OptixPipelineLinkOptions
   \*pipelineLinkOptions, const OptixProgramGroup \*programGroups, unsigned int
   numProgramGroups, char \*logString, size\_t \*logStringSize, OptixPipeline \*pipeline)
- OptixResult optixPipelineDestroy (OptixPipeline pipeline)
- OptixResult optixPipelineSetStackSize (OptixPipeline pipeline, unsigned int directCallableStackSizeFromTraversal, unsigned int directCallableStackSizeFromState, unsigned int continuationStackSize, unsigned int maxTraversableGraphDepth)

# 3.5.1 Detailed Description

#### 3.5.2 Function Documentation

# 3.5.2.1 OptixResult optixPipelineCreate (

OptixDeviceContext context,

const OptixPipelineCompileOptions \* pipelineCompileOptions,

const OptixPipelineLinkOptions \* pipelineLinkOptions,

const OptixProgramGroup \* programGroups,

unsigned int numProgramGroups,

char \* logString,

size\_t \* logStringSize,

OptixPipeline \* pipeline )

logString is an optional buffer that contains compiler feedback and errors. This information is also passed to the context logger (if enabled), however it may be difficult to correlate output to the logger to specific API invocations when using multiple threads. The output to logString will only contain feedback for this specific invocation of this API call.

logStringSize as input should be a pointer to the number of bytes backing logString. Upon return it contains the length of the log message (including the null terminator) which may be greater than the input value. In this case, the log message will be truncated to fit into logString.

If logString or logStringSize are NULL, no output is written to logString. If logStringSize points to a value that is zero, no output is written. This does not affect output to the context logger if enabled.

in	context	
in	pipelineCompileOptions	
in	pipelineLinkOptions	
in	programGroups	array of ProgramGroup objects
in	numProgramGroups	number of ProgramGroup objects

3.5 Pipelines 43

#### **Parameters**

out	logString	Information will be written to this string. If logStringSize > 0 logString will be null terminated.
in,out	logStringSize	
out	pipeline	

# 3.5.2.2 OptixResult optixPipelineDestroy ( OptixPipeline pipeline )

Thread safety: A pipeline must not be destroyed while it is still in use by concurrent API calls in other threads.

# 3.5.2.3 OptixResult optixPipelineSetStackSize (

OptixPipeline pipeline, unsigned int directCallableStackSizeFromTraversal, unsigned int directCallableStackSizeFromState, unsigned int continuationStackSize, unsigned int maxTraversableGraphDepth)

Sets the stack sizes for a pipeline.

Users are encouraged to see the programming guide and the implementations of the helper functions to understand how to construct the stack sizes based on their particular needs.

If this method is not used, an internal default implementation is used. The default implementation is correct (but not necessarily optimal) as long as the maximum depth of call trees of CC and DC programs is at most 2 and no motion transforms are used.

The maxTraversableGraphDepth responds to the maximal number of traversables visited when calling trace. Every acceleration structure and motion transform count as one level of traversal. E.g., for a simple IAS (instance acceleration structure) -> GAS (geometry acceleration structure) traversal graph, the maxTraversableGraphDepth is two. For IAS -> MT (motion transform) -> GAS, the maxTraversableGraphDepth is three. Note that it does not matter whether a IAS or GAS has motion or not, it always counts as one. Launching optix with exceptions turned on (see OPTIX\_EXCEPTION\_FLAG\_TRACE\_DEPTH) will throw an exception if the specified maxTraversableGraphDepth is too small.

in	pipeline	The pipeline to configure the stack size for.
in	directCallableStackSizeFromTraversal	The direct stack size requirement for direct callables invoked from IS or AH.
in	directCallableStackSizeFromState	The direct stack size requirement for direct callables invoked from RG, MS, or CH.
in	continuationStackSize	The continuation stack requirement.
in	maxTraversableGraphDepth	The maximum depth of a traversable graph passed to trace.

44 3.6 Modules

#### 3.6 Modules

#### **Functions**

- OptixResult optixModuleCreateFromPTX (OptixDeviceContext context, const
   OptixModuleCompileOptions \*moduleCompileOptions, const OptixPipelineCompileOptions
   \*pipelineCompileOptions, const char \*PTX, size\_t PTXsize, char \*logString, size\_t
   \*logStringSize, OptixModule \*module)
- OptixResult optixModuleDestroy (OptixModule module)
- OptixResult optixBuiltinISModuleGet (OptixDeviceContext context, const OptixModuleCompileOptions \*moduleCompileOptions, const OptixPipelineCompileOptions \*pipelineCompileOptions, const OptixBuiltinISOptions \*builtinISOptions, OptixModule \*builtinModule)

# 3.6.1 Detailed Description

#### 3.6.2 Function Documentation

# 3.6.2.1 OptixResult optixBuiltinISModuleGet (

```
OptixDeviceContext context,
const OptixModuleCompileOptions * moduleCompileOptions,
const OptixPipelineCompileOptions * pipelineCompileOptions,
const OptixBuiltinISOptions * builtinISOptions,
OptixModule * builtinModule )
```

Returns a module containing the intersection program for the built-in primitive type specified by the builtinISOptions. This module must be used as the moduleIS for the OptixProgramGroupHitgroup in any SBT record for that primitive type. (The entryFunctionNameIS should be null.)

# 3.6.2.2 OptixResult optixModuleCreateFromPTX (

```
OptixDeviceContext context,
const OptixModuleCompileOptions * moduleCompileOptions,
const OptixPipelineCompileOptions * pipelineCompileOptions,
const char * PTX,
size_t PTXsize,
char * logString,
size_t * logStringSize,
OptixModule * module )
```

logString is an optional buffer that contains compiler feedback and errors. This information is also passed to the context logger (if enabled), however it may be difficult to correlate output to the logger to specific API invocations when using multiple threads. The output to logString will only contain feedback for this specific invocation of this API call.

logStringSize as input should be a pointer to the number of bytes backing logString. Upon return it contains the length of the log message (including the null terminator) which may be greater than the input value. In this case, the log message will be truncated to fit into logString.

3.6 Modules 45

If logString or logStringSize are NULL, no output is written to logString. If logStringSize points to a value that is zero, no output is written. This does not affect output to the context logger if enabled.

#### **Parameters**

in	context	
in	moduleCompileOptions	
in	pipelineCompileOptions	All modules in a pipeline need to use the same values for the pipeline compile options.
in	PTX	Pointer to the PTX input string.
in	PTXsize	Parsing proceeds up to PTXsize characters, or the first NUL byte, whichever occurs first.
out	logString	Information will be written to this string. If logStringSize $> 0$ logString will be null terminated.
in,out	logStringSize	
out	module	

#### Returns

OPTIX\_ERROR\_INVALID\_VALUE - context is 0, moduleCompileOptions is 0, pipelineCompileOptions is 0, PTX is 0, module is 0.

# 3.6.2.3 OptixResult optixModuleDestroy ( OptixModule module )

Call for OptixModule objects created with optixModuleCreateFromPTX and optixModuleDeserialize.

Modules must not be destroyed while they are still used by any program group.

Thread safety: A module must not be destroyed while it is still in use by concurrent API calls in other threads.

46 3.7 Program groups

# 3.7 Program groups

#### **Functions**

 OptixResult optixProgramGroupGetStackSize (OptixProgramGroup programGroup, OptixStackSizes \*stackSizes)

- OptixProgramGroupCreate (OptixDeviceContext context, const OptixProgramGroupDesc \*programDescriptions, unsigned int numProgramGroups, const OptixProgramGroupOptions \*options, char \*logString, size\_t \*logStringSize, OptixProgramGroup \*programGroups)
- OptixResult optixProgramGroupDestroy (OptixProgramGroup programGroup)

#### 3.7.1 Detailed Description

#### 3.7.2 Function Documentation

# 3.7.2.1 OptixResult optixProgramGroupCreate (

OptixDeviceContext context,
const OptixProgramGroupDesc \* programDescriptions,
unsigned int numProgramGroups,
const OptixProgramGroupOptions \* options,
char \* logString,
size\_t \* logStringSize,
OptixProgramGroup \* programGroups )

logString is an optional buffer that contains compiler feedback and errors. This information is also passed to the context logger (if enabled), however it may be difficult to correlate output to the logger to specific API invocations when using multiple threads. The output to logString will only contain feedback for this specific invocation of this API call.

logStringSize as input should be a pointer to the number of bytes backing logString. Upon return it contains the length of the log message (including the null terminator) which may be greater than the input value. In this case, the log message will be truncated to fit into logString.

If logString or logStringSize are NULL, no output is written to logString. If logStringSize points to a value that is zero, no output is written. This does not affect output to the context logger if enabled.

Creates numProgramGroups OptiXProgramGroup objects from the specified OptixProgramGroupDesc array. The size of the arrays must match.

in	context		
in	programDescriptions	Descriptions N * OptixProgramGroupDesc	
in	numProgramGroups	N	
in	options		
out	logString	Information will be written to this string. If logStringSize > 0 logString will be null terminated.	

3.7 Program groups 47

## **Parameters**

in,out	logStringSize	
out	programGroups	

# 3.7.2.2 OptixResult optixProgramGroupDestroy ( OptixProgramGroup programGroup )

Thread safety: A program group must not be destroyed while it is still in use by concurrent API calls in other threads.

# 

Returns the stack sizes for the given program group.

in	programGroup	the program group
out	stackSizes	the corresponding stack sizes

48 3.8 Launches

#### 3.8 Launches

#### **Functions**

 OptixResult optixLaunch (OptixPipeline pipeline, CUstream stream, CUdeviceptr pipelineParams, size\_t pipelineParamsSize, const OptixShaderBindingTable \*sbt, unsigned int width, unsigned int height, unsigned int depth)

 OptixResult optixSbtRecordPackHeader (OptixProgramGroup programGroup, void \*sbtRecordHeaderHostPointer)

#### 3.8.1 Detailed Description

#### 3.8.2 Function Documentation

# 3.8.2.1 OptixResult optixLaunch (

OptixPipeline pipeline,
CUstream stream,
CUdeviceptr pipelineParams,
size\_t pipelineParamsSize,
const OptixShaderBindingTable \* sbt,
unsigned int width,
unsigned int height,
unsigned int depth)

Where the magic happens.

The stream and pipeline must belong to the same device context. Multiple launches may be issues in parallel from multiple threads to different streams.

pipelineParamsSize number of bytes are copied from the device memory pointed to by pipelineParams before launch. It is an error if pipelineParamsSize is greater than the size of the variable declared in modules and identified by OptixPipelineCompileOptions::pipelineLaunchParamsVariableName. If the launch params variable was optimized out or not found in the modules linked to the pipeline then the pipelineParams and pipelineParamsSize parameters are ignored.

sbt points to the shader binding table, which defines shader groupings and their resources. See the SBT spec.

in	pipeline	
in	stream	
in	pipelineParams	
in	pipelineParamsSize	
in	sbt	
in	width	number of elements to compute
in	height	number of elements to compute

3.8 Launches 49

# **Parameters**

in	depth	number of elements to compute
----	-------	-------------------------------

Thread safety: In the current implementation concurrent launches to the same pipeline are not supported. Concurrent launches require separate OptixPipeline objects.

# 

in	programGroup	the program group containing the program(s)
out	sbtRecordHeaderHostPointer	the result sbt record header

50 3.9 Acceleration structures

## 3.9.1 Detailed Description

#### 3.9.2 Function Documentation

## 3.9.2.1 OptixResult optixAccelBuild (

OptixDeviceContext context,
CUstream stream,
const OptixAccelBuildOptions \* accelOptions,
const OptixBuildInput \* buildInputs,
unsigned int numBuildInputs,
CUdeviceptr tempBuffer,
size\_t tempBufferSizeInBytes,
CUdeviceptr outputBuffer,
size\_t outputBufferSizeInBytes,
OptixTraversableHandle \* outputHandle,
const OptixAccelEmitDesc \* emittedProperties,
unsigned int numEmittedProperties )

3.9 Acceleration structures 51

## **Parameters**

in	context	
in	stream	
in	accelOptions	accel options
in	buildInputs	an array of OptixBuildInput objects
in	numBuildInputs	must be >= 1 for GAS, and == 1 for IAS
in	tempBuffer	must be a multiple of OPTIX_ACCEL_BUFFER_BYTE_ALIGNMENT
in	tempBufferSizeInBytes	
in	outputBuffer	must be a multiple of OPTIX_ACCEL_BUFFER_BYTE_ALIGNMENT
in	outputBufferSizeInBytes	
out	outputHandle	
out	emittedProperties	types of requested properties and output buffers
in	numEmittedProperties	number of post-build properties to populate (may be zero)

# 3.9.2.2 OptixResult optixAccelCheckRelocationCompatibility (

OptixDeviceContext *context*, const OptixAccelRelocationInfo \* *info*, int \* *compatible* )

Checks if an acceleration structure built using another OptixDeviceContext (that was used to fill in 'info') is compatible with the OptixDeviceContext specified in the 'context' parameter.

Any device is always compatible with itself.

#### **Parameters**

in	context	
in	info	
out	compatible	If OPTIX_SUCCESS is returned 'compatible' will have the value of either:
		<ul> <li>0: This context is not compatible with acceleration structure data associated with 'info'.</li> <li>1: This context is compatible.</li> </ul>

# 3.9.2.3 OptixResult optixAccelCompact (

OptixDeviceContext context,
CUstream stream,
OptixTraversableHandle inputHandle,
CUdeviceptr outputBuffer,
size\_t outputBufferSizeInBytes,

52 3.9 Acceleration structures

# OptixTraversableHandle \* outputHandle )

After building an acceleration structure, it can be copied in a compacted form to reduce memory. In order to be compacted, OPTIX\_BUILD\_FLAG\_ALLOW\_COMPACTION must be supplied in OptixAccelBuildOptions::buildFlags passed to optixAccelBuild.

'outputBuffer' is the pointer to where the compacted acceleration structure will be written. This pointer must be a multiple of OPTIX\_ACCEL\_BUFFER\_BYTE\_ALIGNMENT.

The size of the memory specified in 'outputBufferSizeInBytes' should be at least the value computed using the OPTIX\_PROPERTY\_TYPE\_COMPACTED\_SIZE that was reported during optixAccelBuild.

#### **Parameters**

in	context	
in	stream	
in	inputHandle	
in	outputBuffer	
in	outputBufferSizeInBytes	
out	outputHandle	

# 3.9.2.4 OptixResult optixAccelComputeMemoryUsage (

OptixDeviceContext context,
const OptixAccelBuildOptions \* accelOptions,
const OptixBuildInput \* buildInputs,
unsigned int numBuildInputs,
OptixAccelBufferSizes \* bufferSizes )

#### **Parameters**

in	context	device context of the pipeline
in	accelOptions	accel options
in	buildInputs	an array of OptixBuildInput objects
in	numBuildInputs	number of elements in buildInputs (must be at least 1)
out	bufferSizes	fills in buffer sizes

## 3.9.2.5 OptixResult optixAccelGetRelocationInfo (

OptixDeviceContext *context,*OptixTraversableHandle *handle,*OptixAccelRelocationInfo \* *info* )

Obtain relocation information, stored in OptixAccelRelocationInfo, for a given context and acceleration structure's traversable handle.

The relocation information can be passed to optixAccelCheckRelocationCompatibility to determine if an

3.9 Acceleration structures 53

acceleration structure, referenced by 'handle', can be relocated to a different device's memory space (see optixAccelCheckRelocationCompatibility).

When used with optixAccelRelocate, it provides data necessary for doing the relocation.

If the acceleration structure data associated with 'handle' is copied multiple times, the same OptixAccelRelocationInfo can also be used on all copies.

#### **Parameters**

in	context	
in	handle	
out	info	

#### Returns

OPTIX\_ERROR\_INVALID\_VALUE will be returned for traversable handles that are not from acceleration structure builds.

# 3.9.2.6 OptixResult optixAccelRelocate (

OptixDeviceContext context,

CUstream stream,

const OptixAccelRelocationInfo \* info,

CUdeviceptr instanceTraversableHandles,

size\_t numInstanceTraversableHandles,

CUdeviceptr targetAccel,

size\_t targetAccelSizeInBytes,

OptixTraversableHandle \* targetHandle )

optixAccelRelocate is called to update the acceleration structure after it has been relocated. Relocation is necessary when the acceleration structure's location in device memory has changed. optixAccelRelocate does not copy the memory. This function only operates on the relocated memory who's new location is specified by 'targetAccel'. optixAccelRelocate also returns the new OptixTraversableHandle associated with 'targetAccel'. The original memory (source) is not required to be valid, only the OptixAccelRelocationInfo.

Before copying the data and calling optixAccelRelocate, optixAccelCheckRelocationCompatibility should be called to ensure the copy will be compatible with the destination device context.

The memory pointed to by 'targetAccel' should be allocated with the same size as the source acceleration. Similar to the 'outputBuffer' used in optixAccelBuild, this pointer must be a multiple of OPTIX\_ACCEL\_BUFFER\_BYTE\_ALIGNMENT.

The memory in 'targetAccel' must be allocated as long as the accel is in use.

When relocating an accel that contains instances, 'instanceTraversableHandles' and 'numInstanceTraversableHandles' should be supplied. These are the traversable handles of the instances. These can be used when also relocating the instances. No updates to the bounds are performed. Use optixAccelBuild to update the bounds. 'instanceTraversableHandles' and 'numInstanceTraversableHandles' may be zero when relocating bottom level accel (i.e. an accel with no instances).

54 3.9 Acceleration structures

# **Parameters**

in	context	
in	stream	
in	info	
in	instanceTraversableHandles	
in	numInstanceTraversableHandles	
in	targetAccel	
in	targetAccelSizeInBytes	
out	targetHandle	

# 3.9.2.7 OptixResult optixConvertPointerToTraversableHandle (

OptixDeviceContext onDevice,

CUdeviceptr pointer,

OptixTraversableType traversableType,

OptixTraversableHandle \* traversableHandle )

j	in	onDevice	
j	in	pointer	pointer to traversable allocated in OptixDeviceContext. This pointer must be a multiple of OPTIX_TRANSFORM_BYTE_ALIGNMENT
j	in	traversableType	Type of OptixTraversableHandle to create
(	out	traversableHandle	traversable handle. traversableHandle must be in host memory

3.10 Denoiser 55

#### 3.10 Denoiser

#### **Functions**

 OptixResult optixDenoiserCreate (OptixDeviceContext context, const OptixDenoiserOptions \*options, OptixDenoiser \*denoiser)

- OptixResult optixDenoiserSetModel (OptixDenoiser denoiser, OptixDenoiserModelKind kind, void \*data, size\_t sizeInBytes)
- OptixResult optixDenoiserDestroy (OptixDenoiser denoiser)
- OptixResult optixDenoiserComputeMemoryResources (const OptixDenoiser denoiser, unsigned int outputWidth, unsigned int outputHeight, OptixDenoiserSizes \*returnSizes)
- OptixResult optixDenoiserSetup (OptixDenoiser denoiser, CUstream stream, unsigned int inputWidth, unsigned int inputHeight, CUdeviceptr denoiserState, size\_t denoiserStateSizeInBytes, CUdeviceptr scratch, size\_t scratchSizeInBytes)
- OptixResult optixDenoiserInvoke (OptixDenoiser denoiser, CUstream stream, const
   OptixDenoiserParams \*params, CUdeviceptr denoiserState, size\_t denoiserStateSizeInBytes,
   const OptixImage2D \*inputLayers, unsigned int numInputLayers, unsigned int inputOffsetX,
   unsigned int inputOffsetY, const OptixImage2D \*outputLayer, CUdeviceptr scratch, size\_t
   scratchSizeInBytes)
- OptixResult optixDenoiserComputeIntensity (OptixDenoiser denoiser, CUstream stream, const OptixImage2D \*inputImage, CUdeviceptr outputIntensity, CUdeviceptr scratch, size\_t scratchSizeInBytes)
- OptixResult optixDenoiserComputeAverageColor (OptixDenoiser denoiser, CUstream stream, const OptixImage2D \*inputImage, CUdeviceptr outputAverageColor, CUdeviceptr scratch, size\_t scratchSizeInBytes)

# 3.10.1 Detailed Description

### 3.10.2 Function Documentation

## 3.10.2.1 OptixResult optixDenoiserComputeAverageColor (

OptixDenoiser denoiser,

CUstream stream,

const OptixImage2D \* inputImage,

CUdeviceptr outputAverageColor,

CUdeviceptr scratch,

size t scratchSizeInBytes )

Compute average logarithmic for each of the first three channels for the given image. When denoising tiles the intensity of the entire image should be computed, i.e. not per tile to get consistent results. This function needs scratch memory with a size of at least size of (int) \* (3 + 3 \* inputImage::width \* inputImage::height). When denoising entire images (no tiling) the same scratch memory as passed to optixDenoiserInvoke could be used.

data type unsigned char is not supported for 'inputImage', it must be 3 or 4 component half/float.

56 3.10 Denoiser

#### **Parameters**

in	denoiser	
in	stream	
in	inputImage	
out	outputAverageColor	three floats
in	scratch	
in	scratchSizeInBytes	

# 3.10.2.2 OptixResult optixDenoiserComputeIntensity (

OptixDenoiser denoiser,

CUstream stream,

const OptixImage2D \* inputImage,

CUdeviceptr outputIntensity,

CUdeviceptr scratch,

size\_t scratchSizeInBytes)

Computes the logarithmic average intensity of the given image. The returned value 'outputIntensity' is multiplied with the RGB values of the input image/tile in optixDenoiserInvoke if given in the parameter OptixDenoiserParams::hdrIntensity (otherwise 'hdrIntensity' must be a null pointer). This is useful for denoising HDR images which are very dark or bright. When denoising tiles the intensity of the entire image should be computed, i.e. not per tile to get consistent results.

For each RGB pixel in the inputImage the intensity is calculated and summed if it is greater than 1e-8f: intensity =  $\log(r * 0.212586f + g * 0.715170f + b * 0.072200f)$ . The function returns 0.18 / exp(sum of intensities / number of summed pixels). More details could be found in the Reinhard tonemapping paper: http://www.cmap.polytechnique.fr/~peyre/cours/x2005signal/hdr\_photographic.pdf

This function needs scratch memory with a size of at least sizeof( int ) \* ( 2 + inputImage::width \* inputImage::height). When denoising entire images (no tiling) the same scratch memory as passed to optixDenoiserInvoke could be used. data type unsigned char is not supported for 'inputImage', it must be 3 or 4 component half/float.

### **Parameters**

in	denoiser	
in	stream	
in	inputlmage	
out	outputIntensity	single float
in	scratch	
in	scratchSizeInBytes	

# 3.10.2.3 OptixResult optixDenoiserComputeMemoryResources ( const OptixDenoiser *denoiser*,

3.10 Denoiser 57

unsigned int *outputWidth*, unsigned int *outputHeight*, OptixDenoiserSizes \* *returnSizes* )

Computes the GPU memory resources required to execute the denoiser.

Memory for state and scratch buffers must be allocated with the sizes in 'returnSizes' and scratch memory passed to optixDenoiserSetup, optixDenoiserInvoke, optixDenoiserComputeIntensity and optixDenoiserComputeAverageColor. For tiled denoising an overlap area must be added to each tile on all sides which increases the amount of memory needed to denoise a tile. In case of tiling use withOverlapScratchSizeInBytes. If only full resolution images are denoised, withoutOverlapScratchSizeInBytes can be used which is always smaller than withOverlapScratchSizeInBytes.

'outputWidth' and 'outputHeight' is the dimension of the image to be denoised (without overlap in case tiling is being used). 'outputWidth' and 'outputHeight' must be greater than or equal to the dimensions passed to optixDenoiserSetup.

#### **Parameters**

in	denoiser	
in	outputWidth	
in	outputHeight	
out	returnSizes	

## 3.10.2.4 OptixResult optixDenoiserCreate (

OptixDeviceContext context, const OptixDenoiserOptions \* options, OptixDenoiser \* denoiser )

Creates a denoiser object with the given options.

#### **Parameters**

in	context	
in	options	
out	denoiser	

# 3.10.2.5 OptixResult optixDenoiserDestroy ( OptixDenoiser denoiser )

Destroys the denoiser object and any associated host resources.

# 3.10.2.6 OptixResult optixDenoiserInvoke (

OptixDenoiser denoiser,
CUstream stream,

58 3.10 Denoiser

const OptixDenoiserParams \* params,
CUdeviceptr denoiserState,
size\_t denoiserStateSizeInBytes,
const OptixImage2D \* inputLayers,
unsigned int numInputLayers,
unsigned int inputOffsetX,
unsigned int inputOffsetY,
const OptixImage2D \* outputLayer,
CUdeviceptr scratch,
size\_t scratchSizeInBytes )

Invokes denoiser on a set of input data and produces at least one output image. State memory must be available during the execution of the denoiser (or until optixDenoiserSetup is called with a new state memory pointer). Scratch memory passed is used only for the duration of this function. Scratch and state memory sizes must have a size greater than or equal to the sizes as returned by optixDenoiserComputeMemoryResources.

'inputOffsetX' and 'inputOffsetY' are pixel offsets in the 'inputLayers' image specifying the beginning of the image without overlap. When denoising an entire image without tiling there is no overlap and 'inputOffsetX' and 'inputOffsetY' must be zero. When denoising a tile which is adjacent to one of the four sides of the entire image the corresponding offsets must also be zero since there is no overlap at the side adjacent to the image border.

If the model kind OPTIX\_DENOISER\_MODEL\_KIND\_AOV is selected this function will denoise all AOVs stored in the input layers. AOVs must be stored behind all model-specific input layers such as albedo, normal in 'inputLayers'. The beauty input image (first image in 'inputLayers') will be denoised and written to outputLayer. AOVs will be written subsequently, i.e. for each AOV there must be an OptixImage2D allocated in 'outputLayer'.

in	denoiser	
in	stream	
in	params	
in	denoiserState	
in	denoiserStateSizeInBytes	
in	inputLayers	
in	numInputLayers	
in	inputOffsetX	
in	inputOffsetY	
in	outputLayer	
in	scratch	
in	scratchSizeInBytes	

3.10 Denoiser 59

# 3.10.2.7 OptixResult optixDenoiserSetModel (

OptixDenoiser denoiser,
OptixDenoiserModelKind kind,
void \* data,
size\_t sizeInBytes )

Sets the model of the denoiser.

If the kind is OPTIX\_DENOISER\_MODEL\_KIND\_USER, then the data and sizeInByes must not be null and zero respectively. For other kinds, these parameters must be zero. If the model kind is OPTIX\_DENOISER\_MODEL\_KIND\_AOV, HDR AOV images can be passed in the input layer to 'optixDenoiserInvoke' in addition to the beauty, rgb, albedo and normal images. Each AOV image is denoised separately. The denoised AOVs can be composited into a final denoised beauty image in a compositing step after denoising.

#### **Parameters**

in	denoiser	
in	kind	
in	data	
in	sizeInBytes	

#### 3.10.2.8 OptixResult optixDenoiserSetup (

OptixDenoiser denoiser,
CUstream stream,
unsigned int inputWidth,
unsigned int inputHeight,
CUdeviceptr denoiserState,
size\_t denoiserStateSizeInBytes,
CUdeviceptr scratch,
size\_t scratchSizeInBytes)

Initializes the state required by the denoiser.

'inputWidth' and 'inputHeight' must include overlap on both sides of the image if tiling is being used. The overlap is returned by optixDenoiserComputeMemoryResources. For subsequent calls to optixDenoiserInvoke 'inputWidth' and 'inputHeight' are the maximum dimensions of the input layers. Dimensions of the input layers passed to optixDenoiserInvoke may be different in each invocation however they always must be smaller than 'inputWidth' and 'inputHeight' passed to optixDenoiserSetup.

#### 3.11.1 Detailed Description

OptiX Types.

#### 3.11.2 Macro Definition Documentation

# 3.11.2.1 #define OPTIX\_AABB\_BUFFER\_BYTE\_ALIGNMENT 8ull

Alignment requirement for OptixBuildInputCustomPrimitiveArray::aabbBuffers.

# 3.11.2.2 #define OPTIX\_ACCEL\_BUFFER\_BYTE\_ALIGNMENT 128ull

Alignment requirement for output and temporay buffers for acceleration structures.

## 3.11.2.3 #define OPTIX\_COMPILE\_DEFAULT\_MAX\_REGISTER\_COUNT 0

Maximum number of registers allowed. Defaults to no explicit limit.

#### 3.11.2.4 #define OPTIX\_GEOMETRY\_TRANSFORM\_BYTE\_ALIGNMENT 16ull

Alignment requirement for OptixBuildInputTriangleArray::preTransform.

#### 3.11.2.5 #define OPTIX INSTANCE BYTE ALIGNMENT 16ull

Alignment requirement for OptixBuildInputInstanceArray::instances.

## 3.11.2.6 #define OPTIX\_SBT\_RECORD\_ALIGNMENT 16ull

Alignment requirement for device pointers in OptixShaderBindingTable.

# 3.11.2.7 #define OPTIX\_SBT\_RECORD\_HEADER\_SIZE ( (size\_t)32 )

Size of the SBT record headers.

#### 3.11.2.8 #define OPTIX\_TRANSFORM\_BYTE\_ALIGNMENT 64ull

Alignment requirement for OptixStaticTransform, OptixMatrixMotionTransform, OptixSRTMotionTransform.

#### 3.11.3 Typedef Documentation

# 3.11.3.1 typedef unsigned long long CUdeviceptr

CUDA device pointer.

#### 3.11.3.2 typedef struct OptixAabb OptixAabb

AABB inputs.

# 3.11.3.3 typedef struct OptixAccelBufferSizes OptixAccelBufferSizes

Struct for querying builder allocation requirements.

Once queried the sizes should be used to allocate device memory of at least these sizes.

See Also

optixAccelComputeMemoryUsage()

#### 3.11.3.4 typedef struct OptixAccelBuildOptions OptixAccelBuildOptions

Build options for acceleration structures.

See Also

optixAccelComputeMemoryUsage(), optixAccelBuild()

# 3.11.3.5 typedef struct OptixAccelEmitDesc OptixAccelEmitDesc

Specifies a type and output destination for emitted post-build properties.

See Also

optixAccelBuild()

#### 3.11.3.6 typedef enum OptixAccelPropertyType OptixAccelPropertyType

Properties which can be emitted during acceleration structure build.

See Also

OptixAccelEmitDesc::type.

#### 3.11.3.7 typedef struct OptixAccelRelocationInfo OptixAccelRelocationInfo

Used to store information related to relocation of acceleration structures.

See Also

optixAccelGetRelocationInfo(), optixAccelCheckRelocationCompatibility(), optixAccelRelocate()

#### 3.11.3.8 typedef enum OptixBuildFlags OptixBuildFlags

Builder Options.

Used for OptixAccelBuildOptions::buildFlags. Can be or'ed together.

#### 3.11.3.9 typedef struct OptixBuildInput OptixBuildInput

Build inputs.

All of them support motion and the size of the data arrays needs to match the number of motion steps

See Also

optixAccelComputeMemoryUsage(), optixAccelBuild()

#### 3.11.3.10 typedef struct OptixBuildInputCurveArray OptixBuildInputCurveArray

Curve inputs.

A curve is a swept surface defined by a 3D spline curve and a varying width (radius). A curve (or "strand") of degree d (3=cubic, 2=quadratic, 1=linear) is represented by N>d vertices and N width values, and comprises N-d segments. Each segment is defined by d+1 consecutive vertices. Each curve may have a different number of vertices.

OptiX describes the curve array as a list of curve segments. The primitive id is the segment number. It is the user's responsibility to maintain a mapping between curves and curve segments. Each index buffer entry i = indexBuffer[primid] specifies the start of a curve segment, represented by d+1 consecutive vertices in the vertex buffer, and d+1 consecutive widths in the width buffer. Width is interpolated the same way vertices are interpolated, that is, using the curve basis.

Each curves build input has only one SBT record. To create curves with different materials in the same BVH, use multiple build inputs.

See Also

OptixBuildInput::curveArray

# 3.11.3.11 typedef struct OptixBuildInputCustomPrimitiveArray OptixBuildInputCustomPrimitiveArray

Custom primitive inputs.

See Also

OptixBuildInput::customPrimitiveArray

# 3.11.3.12 typedef struct OptixBuildInputInstanceArray OptixBuildInputInstanceArray

Instance and instance pointer inputs.

See Also

OptixBuildInput::instanceArray

#### 3.11.3.13 typedef struct OptixBuildInputTriangleArray OptixBuildInputTriangleArray

Triangle inputs.

See Also

OptixBuildInput::triangleArray

# 3.11.3.14 typedef enum OptixBuildInputType OptixBuildInputType

Enum to distinguish the different build input types.

See Also

OptixBuildInput::type

#### 3.11.3.15 typedef enum OptixBuildOperation OptixBuildOperation

Enum to specify the acceleration build operation.

Used in OptixAccelBuildOptions, which is then passed to optixAccelBuild and optixAccelComputeMemoryUsage, this enum indicates whether to do a build or an update of the acceleration structure.

Acceleration structure updates utilize the same acceleration structure, but with updated bounds. Updates are typically much faster than builds, however, large perturbations can degrade the quality of the acceleration structure.

See Also

optixAccelComputeMemoryUsage(), optixAccelBuild(), OptixAccelBuildOptions

# 3.11.3.16 typedef struct OptixBuiltinISOptions OptixBuiltinISOptions

Specifies the options for retrieving an intersection program for a built-in primitive type. The primitive type must not be OPTIX\_PRIMITIVE\_TYPE\_CUSTOM.

See Also

optixBuiltinISModuleGet()

# 3.11.3.17 typedef enum OptixCompileDebugLevel OptixCompileDebugLevel

Debug levels.

See Also

OptixModuleCompileOptions::debugLevel

#### 3.11.3.18 typedef enum OptixCompileOptimizationLevel OptixCompileOptimizationLevel

Optimization levels.

See Also

OptixModuleCompileOptions::optLevel

#### 3.11.3.19 typedef struct OptixDenoiser\_t\* OptixDenoiser

Opaque type representing a denoiser instance.

#### 3.11.3.20 typedef enum OptixDenoiserInputKind OptixDenoiserInputKind

Input kinds used by the denoiser.

RGB(A) values less than zero will be clamped to zero. Albedo values must be in the range [0..1] (values less than zero will be clamped to zero). The normals must be transformed into screen space. The z component is not used.

See Also

OptixDenoiserOptions::inputKind

#### 3.11.3.21 typedef enum OptixDenoiserModelKind OptixDenoiserModelKind

Model kind used by the denoiser.

See Also

optixDenoiserSetModel()

# 3.11.3.22 typedef struct OptixDenoiserOptions OptixDenoiserOptions

Options used by the denoiser.

See Also

optixDenoiserCreate()

# 3.11.3.23 typedef struct OptixDenoiserParams OptixDenoiserParams

Various parameters used by the denoiser.

See Also

optixDenoiserInvoke()
optixDenoiserComputeIntensity()
optixDenoiserComputeAverageColor()

# 3.11.3.24 typedef struct OptixDenoiserSizes OptixDenoiserSizes

Various sizes related to the denoiser.

See Also

optixDenoiserComputeMemoryResources()

# 3.11.3.25 typedef struct OptixDeviceContext\_t\* OptixDeviceContext

Opaque type representing a device context.

# 3.11.3.26 typedef struct OptixDeviceContextOptions OptixDeviceContextOptions

Parameters used for optixDeviceContextCreate()

See Also

optixDeviceContextCreate()

# 3.11.3.27 typedef enum OptixDeviceContextValidationMode OptixDeviceContextValidation-Mode

Validation mode settings.

When enabled, certain device code utilities will be enabled to provide as good debug and error checking facilities as possible.

See Also

optixDeviceContextCreate()

#### 3.11.3.28 typedef enum OptixDeviceProperty OptixDeviceProperty

Parameters used for optixDeviceContextGetProperty()

See Also

optixDeviceContextGetProperty()

# 3.11.3.29 typedef enum OptixExceptionCodes OptixExceptionCodes

The following values are used to indicate which exception was thrown.

# 3.11.3.30 typedef enum OptixExceptionFlags OptixExceptionFlags

Exception flags.

See Also

OptixPipelineCompileOptions::exceptionFlags, OptixExceptionCodes

# 3.11.3.31 typedef enum OptixGeometryFlags OptixGeometryFlags

Flags used by OptixBuildInputTriangleArray::flags and OptixBuildInputCurveArray::flag and OptixBuildInputCustomPrimitiveArray::flags.

# 3.11.3.32 typedef enum OptixHitKind OptixHitKind

Legacy type: A subset of the hit kinds for built-in primitive intersections. It is preferred to use optixGetPrimitiveType(), together with optixIsFrontFaceHit() or optixIsBackFaceHit().

See Also

optixGetHitKind()

#### 3.11.3.33 typedef struct OptixImage2D OptixImage2D

Image descriptor used by the denoiser.

See Also

optixDenoiserInvoke(), optixDenoiserComputeIntensity()

# 3.11.3.34 typedef enum OptixIndicesFormat OptixIndicesFormat

Format of indices used int OptixBuildInputTriangleArray::indexFormat.

#### 3.11.3.35 typedef struct OptixInstance OptixInstance

Instances.

See Also

OptixBuildInputInstanceArray::instances

#### 3.11.3.36 typedef enum OptixInstanceFlags OptixInstanceFlags

Flags set on the OptixInstance::flags.

These can be or'ed together to combine multiple flags.

# 3.11.3.37 typedef void( \* OptixLogCallback)(unsigned int level, const char \*tag, const char \*message, void \*cbdata)

Type of the callback function used for log messages.

#### **Parameters**

in	level	The log level indicates the severity of the message. See below for possible values.	
in	tag	A terse message category description (e.g., 'SCENE STAT').	
in	message	Null terminated log message (without newline at the end).	
in	ch cbdata Callback data that was provided with the callback pointer.		

It is the users responsibility to ensure thread safety within this function.

The following log levels are defined.

0 disable Setting the callback level will disable all messages. The callback function will not be called in this case. 1 fatal A non-recoverable error. The context and/or OptiX itself might no longer be in a usable state. 2 error A recoverable error, e.g., when passing invalid call parameters. 3 warning Hints that OptiX might not behave exactly as requested by the user or may perform slower than expected. 4 print Status or progress messages.

Higher levels might occur.

See Also

optixDeviceContextSetLogCallback(), OptixDeviceContextOptions

#### 3.11.3.38 typedef struct OptixMatrixMotionTransform OptixMatrixMotionTransform

Represents a matrix motion transformation.

The device address of instances of this type must be a multiple of OPTIX\_TRANSFORM\_BYTE\_ALIGNMENT.

This struct, as defined here, handles only N=2 motion keys due to the fixed array length of its transform member. The following example shows how to create instances for an arbitrary number N of motion keys:

# 3.11.3.39 typedef struct OptixModule\_t\* OptixModule

optixConvertPointerToTraversableHandle()

Opaque type representing a module.

# 3.11.3.40 typedef struct OptixModuleCompileBoundValueEntry OptixModuleCompileBound-ValueEntry

Struct for specifying specializations for pipelineParams as specified in OptixPipelineCompileOptions::pipelineLaunchParamsVariableName.

The bound values are supposed to represent a constant value in the pipelineParams. OptiX will attempt to locate all loads from the pipelineParams and correlate them to the appropriate bound value, but there are cases where OptiX cannot safely or reliably do this. For example if the pointer to the pipelineParams is passed as an argument to a non-inline function or the offset of the load to the pipelineParams cannot be statically determined (e.g. accessed in a loop). No module should rely on the value being specialized in order to work correctly. The values in the pipelineParams specified on optixLaunch should match the bound value. If validation mode is enabled on the context, OptiX will verify that the bound values specified matches the values in pipelineParams specified to optixLaunch.

These values are compiled in to the module as constants. Once the constants are inserted into the code, an optimization pass will be run that will attempt to propagate the consants and remove unreachable code.

If caching is enabled, changes in these values will result in newly compiled modules.

The pipelineParamOffset and sizeInBytes must be within the bounds of the pipelineParams variable. OPTIX\_ERROR\_INVALID\_VALUE will be returned from optixModuleCreateFromPTX otherwise.

If more than one bound value overlaps or the size of a bound value is equal to 0, an OPTIX\_ERROR\_INVALID\_VALUE will be returned from optixModuleCreateFromPTX.

The same set of bound values do not need to be used for all modules in a pipeline, but overlapping values between modules must have the same value. OPTIX\_ERROR\_INVALID\_VALUE will be returned from optixPipelineCreate otherwise.

See Also

OptixModuleCompileOptions

#### 3.11.3.41 typedef struct OptixModuleCompileOptions OptixModuleCompileOptions

Compilation options for module.

See Also

optixModuleCreateFromPTX()

#### 3.11.3.42 typedef enum OptixMotionFlags OptixMotionFlags

Enum to specify motion flags.

See Also

OptixMotionOptions::flags.

# 3.11.3.43 typedef struct OptixMotionOptions OptixMotionOptions

Motion options.

See Also

OptixAccelBuildOptions::motionOptions, OptixMatrixMotionTransform::motionOptions, OptixSRTMotionTransform::motionOptions

#### 3.11.3.44 typedef struct OptixPipeline t\* OptixPipeline

Opaque type representing a pipeline.

# 3.11.3.45 typedef struct OptixPipelineCompileOptions OptixPipelineCompileOptions

Compilation options for all modules of a pipeline.

Similar to OptixModuleCompileOptions, but these options here need to be equal for all modules of a pipeline.

See Also

optixModuleCreateFromPTX(), optixPipelineCreate()

# 3.11.3.46 typedef struct OptixPipelineLinkOptions OptixPipelineLinkOptions

Link options for a pipeline.

See Also

optixPipelineCreate()

# 3.11.3.47 typedef enum OptixPixelFormat OptixPixelFormat

Pixel formats used by the denoiser.

See Also

OptixImage2D::format

#### 3.11.3.48 typedef enum OptixPrimitiveType OptixPrimitiveType

Builtin primitive types.

#### 3.11.3.49 typedef enum OptixPrimitiveTypeFlags OptixPrimitiveTypeFlags

Builtin flags may be bitwise combined.

See Also

OptixPipelineCompileOptions::usesPrimitiveTypeFlags

#### 3.11.3.50 typedef struct OptixProgramGroup\_t\* OptixProgramGroup

Opaque type representing a program group.

# 3.11.3.51 typedef struct OptixProgramGroupCallables OptixProgramGroupCallables

Program group representing callables.

Module and entry function name need to be valid for at least one of the two callables.

See Also

#OptixProgramGroupDesc::callables

#### 3.11.3.52 typedef struct OptixProgramGroupDesc OptixProgramGroupDesc

Descriptor for program groups.

#### 3.11.3.53 typedef enum OptixProgramGroupFlags OptixProgramGroupFlags

Flags for program groups.

# 3.11.3.54 typedef struct OptixProgramGroupHitgroup OptixProgramGroupHitgroup

Program group representing the hitgroup.

For each of the three program types, module and entry function name might both be nullptr.

See Also

OptixProgramGroupDesc::hitgroup

# 3.11.3.55 typedef enum OptixProgramGroupKind OptixProgramGroupKind

Distinguishes different kinds of program groups.

#### 3.11.3.56 typedef struct OptixProgramGroupOptions OptixProgramGroupOptions

Program group options.

See Also

optixProgramGroupCreate()

# 3.11.3.57 typedef struct OptixProgramGroupSingleModule OptixProgramGroupSingleModule

Program group representing a single module.

Used for raygen, miss, and exception programs. In case of raygen and exception programs, module and entry function name need to be valid. For miss programs, module and entry function name might both be nullptr.

See Also

OptixProgramGroupDesc::raygen, OptixProgramGroupDesc::miss,

Optix Program Group Desc:: exception

# 3.11.3.58 typedef OptixResult( OptixQueryFunctionTable\_t)(int abild, unsigned int numOptions, OptixQueryFunctionTableOptions \*, const void \*\*, void \*functionTable, size\_t sizeOfTable)

Type of the function optixQueryFunctionTable()

#### 3.11.3.59 typedef enum OptixQueryFunctionTableOptions OptixQueryFunctionTableOptions

Options that can be passed to optixQueryFunctionTable()

#### 3.11.3.60 typedef enum OptixRayFlags OptixRayFlags

Ray flags passed to the device function optixTrace(). These affect the behavior of traversal per invocation.

See Also

optixTrace()

#### 3.11.3.61 typedef enum OptixResult OptixResult

Result codes returned from API functions.

All host side API functions return OptixResult with the exception of optixGetErrorName and optixGetErrorString. When successful OPTIX\_SUCCESS is returned. All return codes except for OPTIX\_SUCCESS should be assumed to be errors as opposed to a warning.

See Also

optixGetErrorName(), optixGetErrorString()

# 3.11.3.62 typedef struct OptixShaderBindingTable OptixShaderBindingTable

Describes the shader binding table (SBT)

See Also

optixLaunch()

#### 3.11.3.63 typedef struct OptixSRTData OptixSRTData

Represents an SRT transformation.

An SRT transformation can represent a smooth rotation with fewer motion keys than a matrix transformation. Each motion key is constructed from elements taken from a matrix S, a quaternion R, and a translation T.

[ sx a b pvx]

The scaling matrix S = [0 sy c pvy] defines an affine transformation that can include scale, shear, and a [0 0 sz pvz]

translation. The translation allows to define the pivot point for the subsequent rotation.

The quaternion R = [qx, qy, qz, qw] describes a rotation with angular component qw = cos(theta/2) and other components [qx, qy, qz] = sin(theta/2) \* [ax, ay, az] where the axis [ax, ay, az] is normalized.

```
[ 1 0 0 tx]
```

The translation  $T = [0 \ 1 \ 0 \ ty]$  defines another translation that is applied after the rotation. Typically, this  $[0 \ 0 \ 1 \ tz]$ 

translation includes the inverse translation from the matrix S to reverse its effect.

To obtain the effective transformation at time t, the elements of the components of S, R, and T will be interpolated linearly. The components are then multiplied to obtain the combined transformation C = T \* R \* S. The transformation C is the effective object-to-world transformations at time t, and  $C^{\wedge}(-1)$  is the effective world-to-object transformation at time t.

See Also

OptixSRTMotionTransform::srtData, optixConvertPointerToTraversableHandle()

#### 3.11.3.64 typedef struct OptixSRTMotionTransform OptixSRTMotionTransform

Represents an SRT motion transformation.

The device address of instances of this type must be a multiple of OPTIX\_TRANSFORM\_BYTE\_ALIGNMENT.

This struct, as defined here, handles only N=2 motion keys due to the fixed array length of its srtData member. The following example shows how to create instances for an arbitrary number N of motion keys:

optixConvertPointerToTraversableHandle()

See Also

#### 3.11.3.65 typedef struct OptixStackSizes OptixStackSizes

Describes the stack size requirements of a program group.

See Also

optixProgramGroupGetStackSize()

# 3.11.3.66 typedef struct OptixStaticTransform OptixStaticTransform

Static transform.

The device address of instances of this type must be a multiple of OPTIX\_TRANSFORM\_BYTE\_ALIGNMENT.

See Also

optixConvertPointerToTraversableHandle()

# 3.11.3.67 typedef enum OptixTransformFormat OptixTransformFormat

Format of transform used in OptixBuildInputTriangleArray::transformFormat.

#### 3.11.3.68 typedef enum OptixTransformType OptixTransformType

Transform.

OptixTransformType is used by the device function optixGetTransformTypeFromHandle() to determine the type of the OptixTraversableHandle returned from optixGetTransformListHandle().

#### 3.11.3.69 typedef enum OptixTraversableGraphFlags OptixTraversableGraphFlags

Specifies the set of valid traversable graphs that may be passed to invocation of optixTrace(). Flags may be bitwise combined.

# 3.11.3.70 typedef unsigned long long OptixTraversableHandle

Traversable handle.

#### 3.11.3.71 typedef enum OptixTraversableType OptixTraversableType

Traversable Handles.

See Also

optixConvertPointerToTraversableHandle()

#### 3.11.3.72 typedef enum OptixVertexFormat OptixVertexFormat

Format of vertices used in OptixBuildInputTriangleArray::vertexFormat.

# 3.11.3.73 typedef unsigned int OptixVisibilityMask

Visibility mask.

#### 3.11.4 Enumeration Type Documentation

# 3.11.4.1 enum OptixAccelPropertyType

Properties which can be emitted during acceleration structure build.

See Also

OptixAccelEmitDesc::type.

Enumerator

**OPTIX\_PROPERTY\_TYPE\_COMPACTED\_SIZE** Size of a compacted acceleration structure. The device pointer points to a uint64.

OPTIX\_PROPERTY\_TYPE\_AABBS OptixAabb \* numMotionSteps.

### 3.11.4.2 enum OptixBuildFlags

Builder Options.

Used for OptixAccelBuildOptions::buildFlags. Can be or'ed together.

Enumerator

OPTIX\_BUILD\_FLAG\_NONE No special flags set.

**OPTIX\_BUILD\_FLAG\_ALLOW\_UPDATE** Allow updating the build with new vertex positions with subsequent calls to optixAccelBuild.

OPTIX\_BUILD\_FLAG\_ALLOW\_COMPACTION

OPTIX\_BUILD\_FLAG\_PREFER\_FAST\_TRACE

OPTIX\_BUILD\_FLAG\_PREFER\_FAST\_BUILD

**OPTIX\_BUILD\_FLAG\_ALLOW\_RANDOM\_VERTEX\_ACCESS** Allow access to random baked vertex in closesthit.

#### 3.11.4.3 enum OptixBuildInputType

Enum to distinguish the different build input types.

See Also

OptixBuildInput::type

Enumerator

OPTIX\_BUILD\_INPUT\_TYPE\_TRIANGLES Triangle inputs.

See Also

OptixBuildInputTriangleArray

OPTIX\_BUILD\_INPUT\_TYPE\_CUSTOM\_PRIMITIVES Custom primitive inputs.

See Also

OptixBuildInputCustomPrimitiveArray

OPTIX\_BUILD\_INPUT\_TYPE\_INSTANCES Instance inputs.

See Also

OptixBuildInputInstanceArray

OPTIX\_BUILD\_INPUT\_TYPE\_INSTANCE\_POINTERS Instance pointer inputs.

See Also

**OptixBuildInputInstanceArray** 

OPTIX\_BUILD\_INPUT\_TYPE\_CURVES Curve inputs.

See Also

**OptixBuildInputCurveArray** 

#### 3.11.4.4 enum OptixBuildOperation

Enum to specify the acceleration build operation.

Used in OptixAccelBuildOptions, which is then passed to optixAccelBuild and optixAccelComputeMemoryUsage, this enum indicates whether to do a build or an update of the acceleration structure.

Acceleration structure updates utilize the same acceleration structure, but with updated bounds. Updates are typically much faster than builds, however, large perturbations can degrade the quality of the acceleration structure.

See Also

optixAccelComputeMemoryUsage(), optixAccelBuild(), OptixAccelBuildOptions

Enumerator

OPTIX\_BUILD\_OPERATION\_BUILD Perform a full build operation.OPTIX\_BUILD\_OPERATION\_UPDATE Perform an update using new bounds.

# 3.11.4.5 enum OptixCompileDebugLevel

Debug levels.

See Also

OptixModuleCompileOptions::debugLevel

Enumerator

OPTIX\_COMPILE\_DEBUG\_LEVEL\_DEFAULT Default currently is to add line info.
OPTIX\_COMPILE\_DEBUG\_LEVEL\_NONE No debug information.
OPTIX\_COMPILE\_DEBUG\_LEVEL\_LINEINFO Generate lineinfo only.
OPTIX\_COMPILE\_DEBUG\_LEVEL\_FULL Generate dwarf debug information.

## 3.11.4.6 enum OptixCompileOptimizationLevel

Optimization levels.

#### See Also

OptixModuleCompileOptions::optLevel

#### Enumerator

```
    OPTIX_COMPILE_OPTIMIZATION_DEFAULT Default is to run all optimizations.
    OPTIX_COMPILE_OPTIMIZATION_LEVEL_0 No optimizations.
    OPTIX_COMPILE_OPTIMIZATION_LEVEL_1 Some optimizations.
    OPTIX_COMPILE_OPTIMIZATION_LEVEL_2 Most optimizations.
    OPTIX_COMPILE_OPTIMIZATION_LEVEL_3 All optimizations.
```

## 3.11.4.7 enum OptixDenoiserInputKind

Input kinds used by the denoiser.

RGB(A) values less than zero will be clamped to zero. Albedo values must be in the range [0..1] (values less than zero will be clamped to zero). The normals must be transformed into screen space. The z component is not used.

See Also

OptixDenoiserOptions::inputKind

#### Enumerator

```
OPTIX_DENOISER_INPUT_RGB
OPTIX_DENOISER_INPUT_RGB_ALBEDO
OPTIX_DENOISER_INPUT_RGB_ALBEDO_NORMAL
```

#### 3.11.4.8 enum OptixDenoiserModelKind

Model kind used by the denoiser.

See Also

optixDenoiserSetModel()

- **OPTIX\_DENOISER\_MODEL\_KIND\_USER** Use the model provided by the associated pointer. See the programming guide for a description of how to format the data.
- **OPTIX\_DENOISER\_MODEL\_KIND\_LDR** Use the built-in model appropriate for low dynamic range input.
- **OPTIX\_DENOISER\_MODEL\_KIND\_HDR** Use the built-in model appropriate for high dynamic range input.
- **OPTIX\_DENOISER\_MODEL\_KIND\_AOV** Use the built-in model appropriate for high dynamic range input and support for AOVs.

#### 3.11.4.9 enum OptixDeviceContextValidationMode

Validation mode settings.

When enabled, certain device code utilities will be enabled to provide as good debug and error checking facilities as possible.

See Also

optixDeviceContextCreate()

Enumerator

OPTIX\_DEVICE\_CONTEXT\_VALIDATION\_MODE\_OFF
OPTIX\_DEVICE\_CONTEXT\_VALIDATION\_MODE\_ALL

#### 3.11.4.10 enum OptixDeviceProperty

Parameters used for optixDeviceContextGetProperty()

See Also

optixDeviceContextGetProperty()

- OPTIX\_DEVICE\_PROPERTY\_LIMIT\_MAX\_TRACE\_DEPTH Maximum value for OptixPipelineLinkOptions::maxTraceDepth. sizeof( unsigned int )
- OPTIX\_DEVICE\_PROPERTY\_LIMIT\_MAX\_TRAVERSABLE\_GRAPH\_DEPTH Maximum value to pass into optixPipelineSetStackSize for parameter maxTraversableGraphDepth.v sizeof( unsigned int)
- **OPTIX\_DEVICE\_PROPERTY\_LIMIT\_MAX\_PRIMITIVES\_PER\_GAS** The maximum number of primitives (over all build inputs) as input to a single Geometry Acceleration Structure (GAS). sizeof( unsigned int )
- OPTIX\_DEVICE\_PROPERTY\_LIMIT\_MAX\_INSTANCES\_PER\_IAS The maximum number of instances (over all build inputs) as input to a single Instance Acceleration Structure (IAS). sizeof( unsigned int )
- **OPTIX\_DEVICE\_PROPERTY\_RTCORE\_VERSION** The RT core version supported by the device (0 for no support, 10 for version 1.0). sizeof( unsigned int )
- OPTIX\_DEVICE\_PROPERTY\_LIMIT\_MAX\_INSTANCE\_ID The maximum value for OptixInstance::instanceId. sizeof( unsigned int )
- OPTIX\_DEVICE\_PROPERTY\_LIMIT\_NUM\_BITS\_INSTANCE\_VISIBILITY\_MASK The number of bits available for the OptixInstance::visibilityMask. Higher bits must be set to zero. sizeof( unsigned int)
- **OPTIX\_DEVICE\_PROPERTY\_LIMIT\_MAX\_SBT\_RECORDS\_PER\_GAS** The maximum number of instances that can be added to a single Instance Acceleration Structure (IAS). sizeof( unsigned int )
- OPTIX\_DEVICE\_PROPERTY\_LIMIT\_MAX\_SBT\_OFFSET The maximum value for
   OptixInstance::sbtOffset. sizeof( unsigned int )

#### 3.11.4.11 enum OptixExceptionCodes

The following values are used to indicate which exception was thrown.

- **OPTIX\_EXCEPTION\_CODE\_STACK\_OVERFLOW** Stack overflow of the continuation stack. no exception details.
- **OPTIX\_EXCEPTION\_CODE\_TRACE\_DEPTH\_EXCEEDED** The trace depth is exceeded. no exception details.
- OPTIX\_EXCEPTION\_CODE\_TRAVERSAL\_DEPTH\_EXCEEDED The traversal depth is exceeded. Exception details: optixGetTransformListSize() optixGetTransformListHandle()
- OPTIX\_EXCEPTION\_CODE\_TRAVERSAL\_INVALID\_TRAVERSABLE Traversal encountered an invalid traversable type. Exception details: optixGetTransformListSize() optixGetTransformListHandle() optixGetExceptionInvalidTraversable()
- OPTIX\_EXCEPTION\_CODE\_TRAVERSAL\_INVALID\_MISS\_SBT The miss SBT record index is out of bounds A miss SBT record index is valid within the range [0, OptixShaderBindingTable::missRecordCount) (See optixLaunch) Exception details: optixGetExceptionInvalidSbtOffset()
- OPTIX\_EXCEPTION\_CODE\_TRAVERSAL\_INVALID\_HIT\_SBT The traversal hit SBT record index out of bounds. A traversal hit SBT record index is valid within the range [0, OptixShaderBindingTable::hitgroupRecordCount) (See optixLaunch) The following formula relates the sbt-geometry-acceleration-structure-index (See optixGetSbtGASIndex), sbt-stride-from-trace-call and sbt-offset-from-trace-call (See optixTrace) sbt-index = sbt-instance-offset + (sbt-geometry-acceleration-structure-index \* sbt-stride-from-trace-call) + sbt-offset-from-trace-call
  Exception details: optixGetTransformListSize() optixGetTransformListHandle() optixGetExceptionInvalidSbtOffset() optixGetSbtGASIndex()
- **OPTIX\_EXCEPTION\_CODE\_UNSUPPORTED\_PRIMITIVE\_TYPE** The shader encountered an unsupported primitive type (See OptixPipelineCompileOptions::usesPrimitiveTypeFlags). no exception details.
- **OPTIX\_EXCEPTION\_CODE\_INVALID\_RAY** The shader encountered a call to optixTrace with at least one of the float arguments being inf or nan. Exception details: optixGetExceptionInvalidRay()
- **OPTIX\_EXCEPTION\_CODE\_CALLABLE\_PARAMETER\_MISMATCH** The shader encountered a call to either optixDirectCall or optixCallableCall where the argument count does not match the parameter count of the callable program which is called. Exception details: optixGetExceptionParameterMismatch.
- **OPTIX\_EXCEPTION\_CODE\_BUILTIN\_IS\_MISMATCH** The invoked builtin IS does not match the current GAS.
- OPTIX\_EXCEPTION\_CODE\_CALLABLE\_INVALID\_SBT Tried to call a callable program using an SBT offset that is larger than the number of passed in callable SBT records. Exception details: optixGetExceptionInvalidSbtOffset()
- **OPTIX\_EXCEPTION\_CODE\_CALLABLE\_NO\_DC\_SBT\_RECORD** Tried to call a direct callable using an SBT offset of a record that was built from a program group that did not include a direct callable.

**OPTIX\_EXCEPTION\_CODE\_CALLABLE\_NO\_CC\_SBT\_RECORD** Tried to call a continuation callable using an SBT offset of a record that was built from a program group that did not include a continuation callable.

OPTIX\_EXCEPTION\_CODE\_UNSUPPORTED\_SINGLE\_LEVEL\_GAS Tried to directly traverse a single gas while single gas traversable graphs are not enabled (see OptixTraversable-GraphFlags::OPTIX\_TRAVERSABLE\_GRAPH\_FLAG\_ALLOW\_SINGLE\_GAS). Exception details: optixGetTransformListSize() optixGetTransformListHandle() optixGetExceptionInvalidTraversable()

#### 3.11.4.12 enum OptixExceptionFlags

Exception flags.

See Also

OptixPipelineCompileOptions::exceptionFlags, OptixExceptionCodes

#### Enumerator

**OPTIX\_EXCEPTION\_FLAG\_NONE** No exception are enabled.

**OPTIX\_EXCEPTION\_FLAG\_STACK\_OVERFLOW** Enables exceptions check related to the continuation stack.

OPTIX\_EXCEPTION\_FLAG\_TRACE\_DEPTH Enables exceptions check related to trace depth.

**OPTIX\_EXCEPTION\_FLAG\_USER** Enables user exceptions via optixThrowException(). This flag must be specified for all modules in a pipeline if any module calls optixThrowException().

*OPTIX\_EXCEPTION\_FLAG\_DEBUG* Enables various exceptions check related to traversal.

#### 3.11.4.13 enum OptixGeometryFlags

Flags used by OptixBuildInputTriangleArray::flags and OptixBuildInputCurveArray::flag and OptixBuildInputCustomPrimitiveArray::flags.

#### Enumerator

OPTIX\_GEOMETRY\_FLAG\_NONE No flags set.

**OPTIX\_GEOMETRY\_FLAG\_DISABLE\_ANYHIT** Disables the invocation of the anyhit program. Can be overridden by OPTIX\_INSTANCE\_FLAG\_ENFORCE\_ANYHIT and OPTIX\_RAY\_FLAG\_ENFORCE\_ANYHIT.

**OPTIX\_GEOMETRY\_FLAG\_REQUIRE\_SINGLE\_ANYHIT\_CALL** If set, an intersection with the primitive will trigger one and only one invocation of the anyhit program. Otherwise, the anyhit program may be invoked more than once.

#### 3.11.4.14 enum OptixHitKind

Legacy type: A subset of the hit kinds for built-in primitive intersections. It is preferred to use optixGetPrimitiveType(), together with optixIsFrontFaceHit() or optixIsBackFaceHit().

See Also

optixGetHitKind()

Enumerator

**OPTIX\_HIT\_KIND\_TRIANGLE\_FRONT\_FACE** Ray hit the triangle on the front face. **OPTIX\_HIT\_KIND\_TRIANGLE\_BACK\_FACE** Ray hit the triangle on the back face.

#### 3.11.4.15 enum OptixIndicesFormat

Format of indices used int OptixBuildInputTriangleArray::indexFormat.

Enumerator

**OPTIX\_INDICES\_FORMAT\_NONE** No indices, this format must only be used in combination with triangle soups, i.e., numIndexTriplets must be zero.

OPTIX\_INDICES\_FORMAT\_UNSIGNED\_SHORT3 Three shorts.

OPTIX INDICES FORMAT UNSIGNED INT3 Three ints.

# 3.11.4.16 enum OptixInstanceFlags

Flags set on the OptixInstance::flags.

These can be or'ed together to combine multiple flags.

Enumerator

OPTIX\_INSTANCE\_FLAG\_NONE No special flag set.

OPTIX\_INSTANCE\_FLAG\_DISABLE\_TRIANGLE\_FACE\_CULLING Prevent triangles from getting culled due to their orientation. Effectively ignores ray flags OPTIX\_RAY\_FLAG\_CULL\_BACK\_FACING\_TRIANGLES and OPTIX\_RAY\_FLAG\_CULL\_FRONT\_FACING\_TRIANGLES.

- **OPTIX\_INSTANCE\_FLAG\_FLIP\_TRIANGLE\_FACING** Flip triangle orientation. This affects front/backface culling as well as the reported face in case of a hit.
- **OPTIX\_INSTANCE\_FLAG\_DISABLE\_ANYHIT** Disable anyhit programs for all geometries of the instance. Can be overridden by OPTIX\_RAY\_FLAG\_ENFORCE\_ANYHIT. This flag is mutually exclusive with OPTIX\_INSTANCE\_FLAG\_ENFORCE\_ANYHIT.
- OPTIX\_INSTANCE\_FLAG\_ENFORCE\_ANYHIT Enables anyhit programs for all geometries of the instance. Overrides OPTIX\_GEOMETRY\_FLAG\_DISABLE\_ANYHIT Can be overridden by OPTIX\_RAY\_FLAG\_DISABLE\_ANYHIT. This flag is mutually exclusive with OPTIX\_INSTANCE\_FLAG\_DISABLE\_ANYHIT.
- OPTIX\_INSTANCE\_FLAG\_DISABLE\_TRANSFORM Disable the instance transformation.

#### 3.11.4.17 enum OptixMotionFlags

Enum to specify motion flags.

#### See Also

OptixMotionOptions::flags.

#### Enumerator

OPTIX\_MOTION\_FLAG\_NONE

OPTIX\_MOTION\_FLAG\_START\_VANISH

OPTIX\_MOTION\_FLAG\_END\_VANISH

#### 3.11.4.18 enum OptixPixelFormat

Pixel formats used by the denoiser.

See Also

OptixImage2D::format

#### Enumerator

OPTIX\_PIXEL\_FORMAT\_HALF3 three halfs, RGB
OPTIX\_PIXEL\_FORMAT\_HALF4 four halfs, RGBA
OPTIX\_PIXEL\_FORMAT\_FLOAT3 three floats, RGB
OPTIX\_PIXEL\_FORMAT\_FLOAT4 four floats, RGBA
OPTIX\_PIXEL\_FORMAT\_UCHAR3 three unsigned chars, RGB
OPTIX\_PIXEL\_FORMAT\_UCHAR4 four unsigned chars, RGBA

# 3.11.4.19 enum OptixPrimitiveType

Builtin primitive types.

#### Enumerator

OPTIX\_PRIMITIVE\_TYPE\_CUSTOM Custom primitive.

**OPTIX\_PRIMITIVE\_TYPE\_ROUND\_QUADRATIC\_BSPLINE** B-spline curve of degree 2 with circular cross-section.

**OPTIX\_PRIMITIVE\_TYPE\_ROUND\_CUBIC\_BSPLINE** B-spline curve of degree 3 with circular cross-section.

OPTIX\_PRIMITIVE\_TYPE\_ROUND\_LINEAR Piecewise linear curve with circular cross-section.

OPTIX\_PRIMITIVE\_TYPE\_TRIANGLE Triangle.

# 3.11.4.20 enum OptixPrimitiveTypeFlags

Builtin flags may be bitwise combined.

#### See Also

OptixPipelineCompileOptions::usesPrimitiveTypeFlags

#### Enumerator

OPTIX\_PRIMITIVE\_TYPE\_FLAGS\_CUSTOM Custom primitive.

**OPTIX\_PRIMITIVE\_TYPE\_FLAGS\_ROUND\_QUADRATIC\_BSPLINE** B-spline curve of degree 2 with circular cross-section.

**OPTIX\_PRIMITIVE\_TYPE\_FLAGS\_ROUND\_CUBIC\_BSPLINE** B-spline curve of degree 3 with circular cross-section.

**OPTIX\_PRIMITIVE\_TYPE\_FLAGS\_ROUND\_LINEAR** Piecewise linear curve with circular cross-section.

**OPTIX\_PRIMITIVE\_TYPE\_FLAGS\_TRIANGLE** Triangle.

#### 3.11.4.21 enum OptixProgramGroupFlags

Flags for program groups.

Enumerator

OPTIX\_PROGRAM\_GROUP\_FLAGS\_NONE Currently there are no flags.

# 3.11.4.22 enum OptixProgramGroupKind

Distinguishes different kinds of program groups.

Enumerator

**OPTIX\_PROGRAM\_GROUP\_KIND\_RAYGEN** Program group containing a raygen (RG) program.

See Also

OptixProgramGroupSingleModule, OptixProgramGroupDesc::raygen

**OPTIX\_PROGRAM\_GROUP\_KIND\_MISS** Program group containing a miss (MS) program. See Also

OptixProgramGroupSingleModule, OptixProgramGroupDesc::miss

**OPTIX\_PROGRAM\_GROUP\_KIND\_EXCEPTION** Program group containing an exception (EX) program.

See Also

See Also

OptixProgramGroupHitgroup, OptixProgramGroupDesc::exception

**OPTIX\_PROGRAM\_GROUP\_KIND\_HITGROUP** Program group containing an intersection (IS), any hit (AH), and/or closest hit (CH) program.

OptixProgramGroupSingleModule, OptixProgramGroupDesc::hitgroup

**OPTIX\_PROGRAM\_GROUP\_KIND\_CALLABLES** Program group containing a direct (DC) or continuation (CC) callable program.

See Also

OptixProgramGroupCallables, OptixProgramGroupDesc::callables

#### 3.11.4.23 enum OptixQueryFunctionTableOptions

Options that can be passed to optixQueryFunctionTable()

Enumerator

OPTIX\_QUERY\_FUNCTION\_TABLE\_OPTION\_DUMMY Placeholder (there are no options yet)

# 3.11.4.24 enum OptixRayFlags

Ray flags passed to the device function optixTrace(). These affect the behavior of traversal per invocation.

See Also

optixTrace()

- OPTIX\_RAY\_FLAG\_NONE No change from the behavior configured for the individual AS.
- OPTIX\_RAY\_FLAG\_DISABLE\_ANYHIT Disables anyhit programs for the ray. Overrides OPTIX\_INSTANCE\_FLAG\_ENFORCE\_ANYHIT. This flag is mutually exclusive with OPTIX\_RAY\_FLAG\_ENFORCE\_ANYHIT, OPTIX\_RAY\_FLAG\_CULL\_DISABLED\_ANYHIT, OPTIX\_RAY\_FLAG\_CULL\_ENFORCED\_ANYHIT.
- OPTIX\_RAY\_FLAG\_ENFORCE\_ANYHIT Forces anyhit program execution for the ray.

  Overrides OPTIX\_GEOMETRY\_FLAG\_DISABLE\_ANYHIT as well as

  OPTIX\_INSTANCE\_FLAG\_DISABLE\_ANYHIT. This flag is mutually exclusive with

  OPTIX\_RAY\_FLAG\_DISABLE\_ANYHIT, OPTIX\_RAY\_FLAG\_CULL\_DISABLED\_ANYHIT,

  OPTIX\_RAY\_FLAG\_CULL\_ENFORCED\_ANYHIT.
- **OPTIX\_RAY\_FLAG\_TERMINATE\_ON\_FIRST\_HIT** Terminates the ray after the first hit and executes the closesthit program of that hit.
- **OPTIX\_RAY\_FLAG\_DISABLE\_CLOSESTHIT** Disables closesthit programs for the ray, but still executes miss program in case of a miss.
- OPTIX\_RAY\_FLAG\_CULL\_BACK\_FACING\_TRIANGLES Do not intersect triangle back faces (respects a possible face change due to instance flag OPTIX\_INSTANCE\_FLAG\_FLIP\_TRIANGLE\_FACING). This flag is mutually exclusive with OPTIX\_RAY\_FLAG\_CULL\_FRONT\_FACING\_TRIANGLES.
- OPTIX\_RAY\_FLAG\_CULL\_FRONT\_FACING\_TRIANGLES Do not intersect triangle front faces (respects a possible face change due to instance flag OPTIX\_INSTANCE\_FLAG\_FLIP\_TRIANGLE\_FACING). This flag is mutually exclusive with OPTIX\_RAY\_FLAG\_CULL\_BACK\_FACING\_TRIANGLES.
- OPTIX\_RAY\_FLAG\_CULL\_DISABLED\_ANYHIT Do not intersect geometry which disables anyhit programs (due to setting geometry flag OPTIX\_GEOMETRY\_FLAG\_DISABLE\_ANYHIT or instance flag OPTIX\_INSTANCE\_FLAG\_DISABLE\_ANYHIT). This flag is mutually exclusive with OPTIX\_RAY\_FLAG\_CULL\_ENFORCED\_ANYHIT, OPTIX\_RAY\_FLAG\_ENFORCE\_ANYHIT, OPTIX\_RAY\_FLAG\_ENFORCE\_ANYHIT.

OPTIX\_RAY\_FLAG\_CULL\_ENFORCED\_ANYHIT Do not intersect geometry which have an enabled anyhit program (due to not setting geometry flag OPTIX\_GEOMETRY\_FLAG\_DISABLE\_ANYHIT or setting instance flag OPTIX\_INSTANCE\_FLAG\_ENFORCE\_ANYHIT). This flag is mutually exclusive with OPTIX\_RAY\_FLAG\_CULL\_DISABLED\_ANYHIT, OPTIX\_RAY\_FLAG\_ENFORCE\_ANYHIT, OPTIX\_RAY\_FLAG\_DISABLE\_ANYHIT.

#### 3.11.4.25 enum OptixResult

Result codes returned from API functions.

All host side API functions return OptixResult with the exception of optixGetErrorName and optixGetErrorString. When successful OPTIX\_SUCCESS is returned. All return codes except for OPTIX\_SUCCESS should be assumed to be errors as opposed to a warning.

See Also

optixGetErrorName(), optixGetErrorString()

#### Enumerator

OPTIX\_SUCCESS OPTIX\_ERROR\_INVALID\_VALUE OPTIX\_ERROR\_HOST\_OUT\_OF\_MEMORY OPTIX\_ERROR\_INVALID\_OPERATION OPTIX\_ERROR\_FILE\_IO\_ERROR OPTIX ERROR INVALID FILE FORMAT OPTIX\_ERROR\_DISK\_CACHE\_INVALID\_PATH OPTIX\_ERROR\_DISK\_CACHE\_PERMISSION\_ERROR OPTIX ERROR DISK CACHE DATABASE ERROR OPTIX\_ERROR\_DISK\_CACHE\_INVALID\_DATA OPTIX ERROR LAUNCH FAILURE OPTIX\_ERROR\_INVALID\_DEVICE\_CONTEXT OPTIX\_ERROR\_CUDA\_NOT\_INITIALIZED OPTIX ERROR VALIDATION FAILURE OPTIX ERROR INVALID PTX OPTIX\_ERROR\_INVALID\_LAUNCH\_PARAMETER OPTIX\_ERROR\_INVALID\_PAYLOAD\_ACCESS OPTIX\_ERROR\_INVALID\_ATTRIBUTE\_ACCESS OPTIX\_ERROR\_INVALID\_FUNCTION\_USE OPTIX ERROR INVALID FUNCTION ARGUMENTS OPTIX\_ERROR\_PIPELINE\_OUT\_OF\_CONSTANT\_MEMORY OPTIX\_ERROR\_PIPELINE\_LINK\_ERROR OPTIX ERROR INTERNAL COMPILER ERROR OPTIX\_ERROR\_DENOISER\_MODEL\_NOT\_SET

OPTIX\_ERROR\_DENOISER\_NOT\_INITIALIZED

OPTIX\_ERROR\_ACCEL\_NOT\_COMPATIBLE

OPTIX\_ERROR\_INTERNAL\_ERROR

OPTIX\_ERROR\_UNKNOWN

#### 3.11.4.26 enum OptixTransformFormat

Format of transform used in OptixBuildInputTriangleArray::transformFormat.

#### Enumerator

OPTIX\_TRANSFORM\_FORMAT\_NONE no transform, default for zero initialization
OPTIX\_TRANSFORM\_FORMAT\_MATRIX\_FLOAT12 3x4 row major affine matrix

#### 3.11.4.27 enum OptixTransformType

Transform.

OptixTransformType is used by the device function optixGetTransformTypeFromHandle() to determine the type of the OptixTraversableHandle returned from optixGetTransformListHandle().

#### Enumerator

OPTIX\_TRANSFORM\_TYPE\_NONE Not a transformation.

See Also

OPTIX\_TRANSFORM\_TYPE\_STATIC\_TRANSFORM

OptixStaticTransform

See Also

OPTIX\_TRANSFORM\_TYPE\_MATRIX\_MOTION\_TRANSFORM

OptixMatrixMotionTransform

See Also

OPTIX TRANSFORM TYPE SRT MOTION TRANSFORM

OptixSRTMotionTransform

See Also

OPTIX\_TRANSFORM\_TYPE\_INSTANCE

**OptixInstance** 

# 3.11.4.28 enum OptixTraversableGraphFlags

Specifies the set of valid traversable graphs that may be passed to invocation of optixTrace(). Flags may be bitwise combined.

Enumerator

- **OPTIX\_TRAVERSABLE\_GRAPH\_FLAG\_ALLOW\_ANY** Used to signal that any traversable graphs is valid. This flag is mutually exclusive with all other flags.
- OPTIX\_TRAVERSABLE\_GRAPH\_FLAG\_ALLOW\_SINGLE\_GAS Used to signal that a traversable graph of a single Geometry Acceleration Structure (GAS) without any transforms is valid. This flag may be combined with other flags except for OPTIX\_TRAVERSABLE\_GRAPH\_FLAG\_ALLOW\_ANY.
- OPTIX\_TRAVERSABLE\_GRAPH\_FLAG\_ALLOW\_SINGLE\_LEVEL\_INSTANCING Used to signal that a traversable graph of a single Instance Acceleration Structure (IAS) directly connected to Geometry Acceleration Structure (GAS) traversables without transform traversables in between is valid. This flag may be combined with other flags except for OPTIX\_TRAVERSABLE\_GRAPH\_FLAG\_ALLOW\_ANY.

# 3.11.4.29 enum OptixTraversableType

Traversable Handles.

See Also

optixConvertPointerToTraversableHandle()

Enumerator

OPTIX\_TRAVERSABLE\_TYPE\_STATIC\_TRANSFORM Static transforms.

See Also

OptixStaticTransform

**OPTIX\_TRAVERSABLE\_TYPE\_MATRIX\_MOTION\_TRANSFORM** Matrix motion transform. See Also

OptixMatrixMotionTransform

OPTIX\_TRAVERSABLE\_TYPE\_SRT\_MOTION\_TRANSFORM SRT motion transform.
See Also

OptixSRTMotionTransform

#### 3.11.4.30 enum OptixVertexFormat

Format of vertices used in OptixBuildInputTriangleArray::vertexFormat.

Enumerator

**OPTIX\_VERTEX\_FORMAT\_NONE** No vertices.

*OPTIX\_VERTEX\_FORMAT\_FLOAT3* Vertices are represented by three floats.

OPTIX\_VERTEX\_FORMAT\_FLOAT2 Vertices are represented by two floats.

OPTIX\_VERTEX\_FORMAT\_HALF3 Vertices are represented by three halfs.
OPTIX\_VERTEX\_FORMAT\_HALF2 Vertices are represented by two halfs.
OPTIX\_VERTEX\_FORMAT\_SNORM16\_3
OPTIX\_VERTEX\_FORMAT\_SNORM16\_2

96 3.12 Function Table

# 3.13.1 Detailed Description

OptiX Utilities.

98 3.13 Utilities

#### 3.13.2 Function Documentation

# 3.13.2.1 OptixResult optixInit (

```
void ) [inline]
```

Loads the OptiX library and initializes the function table used by the stubs below.

A variant of optixInitWithHandle() that does not make the handle to the loaded library available.

#### 3.13.2.2 OptixResult optixInitWithHandle (

```
void ** handlePtr ) [inline]
```

Loads the OptiX library and initializes the function table used by the stubs below.

If handlePtr is not nullptr, an OS-specific handle to the library will be returned in \*handlePtr.

See Also

optixUninitWithHandle

#### 3.13.2.3 OptixResult optixUninitWithHandle (

```
void * handle ) [inline]
```

Unloads the OptiX library and zeros the function table used by the stubs below. Takes the handle returned by optixInitWithHandle. All OptixDeviceContext objects must be destroyed before calling this function, or the behavior is undefined.

See Also

optixInitWithHandle

#### 3.13.2.4 OptixResult optixUtilAccumulateStackSizes (

```
OptixProgramGroup programGroup,
OptixStackSizes * stackSizes )
```

Retrieves direct and continuation stack sizes for each program in the program group and accumulates the upper bounds in the correponding output variables based on the semantic type of the program. Before the first invocation of this function with a given instance of OptixStackSizes, the members of that instance should be set to 0.

#### 3.13.2.5 OptixResult optixUtilComputeStackSizes (

```
const OptixStackSizes * stackSizes,
unsigned int maxTraceDepth,
unsigned int maxCCDepth,
unsigned int maxDCDepth,
unsigned int * directCallableStackSizeFromTraversal,
unsigned int * directCallableStackSizeFromState,
unsigned int * continuationStackSize )
```

Computes the stack size values needed to configure a pipeline.

3.13 Utilities 99

See the programming guide for an explanation of the formula.

#### **Parameters**

in	stackSizes	Accumulated stack sizes of all programs in the call graph.
in	maxTraceDepth	Maximum depth of optixTrace() calls.
in	maxCCDepth	Maximum depth of calls trees of continuation callables.
in	maxDCDepth	Maximum depth of calls trees of direct callables.
out	directCallableStackSizeFromTraversal	Direct stack size requirement for direct callables invoked from IS or AH.
out	directCallableStackSizeFromState	Direct stack size requirement for direct callables invoked from RG, MS, or CH.
out	continuationStackSize	Continuation stack requirement.

# 3.13.2.6 OptixResult optixUtilComputeStackSizesCssCCTree (

const OptixStackSizes \* stackSizes,

unsigned int cssCCTree,

unsigned int maxTraceDepth,

unsigned int maxDCDepth,

unsigned int \* directCallableStackSizeFromTraversal,

unsigned int \* directCallableStackSizeFromState,

unsigned int \* continuationStackSize )

Computes the stack size values needed to configure a pipeline.

This variant is similar to optixUtilComputeStackSizes(), except that it expects the value cssCCTree instead of cssCC and maxCCDepth.

See programming guide for an explanation of the formula.

#### **Parameters**

in	stackSizes	Accumulated stack sizes of all programs in the call graph.
in	cssCCTree	Maximum stack size used by calls trees of continuation callables.
in	maxTraceDepth	Maximum depth of optixTrace() calls.
in	maxDCDepth	Maximum depth of calls trees of direct callables.
out	directCallableStackSizeFromTraversal	Direct stack size requirement for direct callables invoked from IS or AH.
out	directCallableStackSizeFromState	Direct stack size requirement for direct callables invoked from RG, MS, or CH.
out	continuationStackSize	Continuation stack requirement.

100 3.13 Utilities

# 3.13.2.7 OptixResult optixUtilComputeStackSizesDCSplit (

const OptixStackSizes \* stackSizes,
unsigned int dssDCFromTraversal,
unsigned int dssDCFromState,
unsigned int maxTraceDepth,
unsigned int maxCCDepth,
unsigned int maxDCDepthFromTraversal,
unsigned int maxDCDepthFromState,
unsigned int \* directCallableStackSizeFromTraversal,
unsigned int \* directCallableStackSizeFromState,
unsigned int \* continuationStackSize )

Computes the stack size values needed to configure a pipeline.

This variant is similar to optixUtilComputeStackSizes(), except that it expects the values dssDC and maxDCDepth split by call site semantic.

See programming guide for an explanation of the formula.

#### **Parameters**

in	stackSizes	Accumulated stack sizes of all programs in the call graph.
in	dssDCFromTraversal	Accumulated direct stack size of all DC programs invoked from IS or AH.
in	dssDCFromState	Accumulated direct stack size of all DC programs invoked from RG, MS, or CH.
in	maxTraceDepth	Maximum depth of optixTrace() calls.
in	maxCCDepth	Maximum depth of calls trees of continuation callables.
in	maxDCDepthFromTraversal	Maximum depth of calls trees of direct callables invoked from IS or AH.
in	maxDCDepthFromState	Maximum depth of calls trees of direct callables invoked from RG, MS, or CH.
out	directCallableStackSizeFromTraversal	Direct stack size requirement for direct callables invoked from IS or AH.
out	directCallableStackSizeFromState	Direct stack size requirement for direct callables invoked from RG, MS, or CH.
out	continuationStackSize	Continuation stack requirement.

#### 3.13.2.8 OptixResult optixUtilComputeStackSizesSimplePathTracer (

OptixProgramGroup programGroupRG,
OptixProgramGroup programGroupMS1,
const OptixProgramGroup \* programGroupCH1,
unsigned int programGroupCH1Count,

3.13 Utilities 101

OptixProgramGroup programGroupMS2, const OptixProgramGroup \* programGroupCH2, unsigned int programGroupCH2Count, unsigned int \* directCallableStackSizeFromTraversal, unsigned int \* directCallableStackSizeFromState, unsigned int \* continuationStackSize )

Computes the stack size values needed to configure a pipeline.

This variant is a specialization of optixUtilComputeStackSizes() for a simple path tracer with the following assumptions: There are only two ray types, camera rays and shadow rays. There are only RG, MS, and CH programs, and no AH, IS, CC, or DC programs. The camera rays invoke only the miss and closest hit programs MS1 and CH1, respectively. The CH1 program might trace shadow rays, which invoke only the miss and closest hit programs MS2 and CH2, respectively.

For flexibility, we allow for each of CH1 and CH2 not just one single program group, but an array of programs groups, and compute the maximas of the stack size requirements per array.

See programming guide for an explanation of the formula.

#### 3.13.2.9 OptixResult optixUtilDenoiserInvokeTiled (

OptixDenoiser & denoiser,
CUstream stream,
const OptixDenoiserParams \* params,
CUdeviceptr denoiserState,
size\_t denoiserStateSizeInBytes,
const OptixImage2D \* inputLayers,
unsigned int numInputLayers,
const OptixImage2D \* outputLayer,
CUdeviceptr scratch,
size\_t scratchSizeInBytes,
unsigned int overlapWindowSizeInPixels,
unsigned int tileWidth,
unsigned int tileHeight) [inline]

Run denoiser on input layers see optixDenoiserInvoke additional parameters:

Runs the denoiser on the input layers on a single GPU and stream using optixDenoiserInvoke. If the input layers' dimensions are larger than the specified tile size, the image is divided into tiles using optixUtilDenoiserSplitImage, and multiple back-to-back invocations are performed in order to reuse the scratch space. Multiple tiles can be invoked concurrently if optixUtilDenoiserSplitImage is used directly and multiple scratch allocations for each concurrent invocation are used. The input parameters are the same as optixDenoiserInvoke except for the addition of the maximum tile size.

#### **Parameters**

in	denoiser	
in	stream	

102 3.13 Utilities

#### **Parameters**

in	params	
in	denoiserState	
in	denoiserStateSizeInBytes	
in	inputLayers	
in	numInputLayers	
in	outputLayer	
in	scratch	
in	scratchSizeInBytes	
in	overlapWindowSizeInPixels	
in	tileWidth

# 3.13.2.10 OptixResult optixUtilDenoiserSplitImage (

const OptixImage2D & input,
const OptixImage2D & output,
unsigned int overlapWindowSizeInPixels,
unsigned int tileWidth,
unsigned int tileHeight,
std::vector< OptixUtilDenoiserImageTile > & tiles ) [inline]

Split image into 2D tiles given horizontal and vertical tile size.

# **Parameters**

in	input	full resolution input image to be split
in	output	full resolution output image
in	overlapWindowSizeInPixels	see OptixDenoiserSizes, optixDenoiserComputeMemoryResources
in	tileWidth	maximum width of tiles
in	tileHeight	maximum height of tiles
out	tiles	list of tiles covering the input image

# 

Return pixel stride in bytes for the given pixel format if the pixelStrideInBytes member of the image is zero. Otherwise return pixelStrideInBytes from the image.

3.13 Utilities 103

# **Parameters**

in	image	Image containing the pixel stride

## 5.7.1 Detailed Description

Curve inputs.

A curve is a swept surface defined by a 3D spline curve and a varying width (radius). A curve (or "strand") of degree d (3=cubic, 2=quadratic, 1=linear) is represented by N>d vertices and N width values, and comprises N-d segments. Each segment is defined by d+1 consecutive vertices. Each curve may have a different number of vertices.

OptiX describes the curve array as a list of curve segments. The primitive id is the segment number. It is the user's responsibility to maintain a mapping between curves and curve segments. Each index buffer entry i = indexBuffer[primid] specifies the start of a curve segment, represented by d+1 consecutive vertices in the vertex buffer, and d+1 consecutive widths in the width buffer. Width is interpolated the same way vertices are interpolated, that is, using the curve basis.

Each curves build input has only one SBT record. To create curves with different materials in the same BVH, use multiple build inputs.

See Also

OptixBuildInput::curveArray

#### 5.7.2 Member Data Documentation

## 5.7.2.1 OptixPrimitiveType OptixBuildInputCurveArray::curveType

Curve degree and basis.

See Also

OptixPrimitiveType

#### 5.7.2.2 unsigned int OptixBuildInputCurveArray::flag

Combination of OptixGeometryFlags describing the primitive behavior.

#### 5.7.2.3 CUdeviceptr OptixBuildInputCurveArray::indexBuffer

Device pointer to array of unsigned ints, one per curve segment. This buffer is required (unlike for OptixBuildInputTriangleArray). Each index is the start of degree+1 consecutive vertices in vertexBuffers, and corresponding widths in widthBuffers and normals in normalBuffers. These define a single segment. Size of array is numPrimitives.

#### 5.7.2.4 unsigned int OptixBuildInputCurveArray::indexStrideInBytes

Stride between indices. If set to zero, indices are assumed to be tightly packed and stride is sizeof( unsigned int).

## 5.7.2.5 const CUdeviceptr\* OptixBuildInputCurveArray::normalBuffers

Reserved for future use.

#### 5.7.2.6 unsigned int OptixBuildInputCurveArray::normalStrideInBytes

Reserved for future use.

## 5.7.2.7 unsigned int OptixBuildInputCurveArray::numPrimitives

Number of primitives. Each primitive is a polynomial curve segment.

#### 5.7.2.8 unsigned int OptixBuildInputCurveArray::numVertices

Number of vertices in each buffer in vertexBuffers.

## 5.7.2.9 unsigned int OptixBuildInputCurveArray::primitiveIndexOffset

Primitive index bias, applied in optixGetPrimitiveIndex(). Sum of primitiveIndexOffset and number of primitives must not overflow 32bits.

## 5.7.2.10 const CUdeviceptr\* OptixBuildInputCurveArray::vertexBuffers

Pointer to host array of device pointers, one per motion step. Host array size must match number of motion keys as set in OptixMotionOptions (or an array of size 1 if OptixMotionOptions::numKeys is set to 1). Each per-motion-key device pointer must point to an array of floats (the vertices of the curves).

#### 5.7.2.11 unsigned int OptixBuildInputCurveArray::vertexStrideInBytes

Stride between vertices. If set to zero, vertices are assumed to be tightly packed and stride is sizeof( float3).

## 5.7.2.12 const CUdeviceptr\* OptixBuildInputCurveArray::widthBuffers

Parallel to vertexBuffers: a device pointer per motion step, each with numVertices float values, specifying the curve width (radius) corresponding to each vertex.

## 5.7.2.13 unsigned int OptixBuildInputCurveArray::widthStrideInBytes

Stride between widths. If set to zero, widths are assumed to be tightly packed and stride is sizeof( float ).

# 5.8 OptixBuildInputCustomPrimitiveArray Struct Reference

- · unsigned int primitiveIndexOffset

## 5.8.1 Detailed Description

Custom primitive inputs.

See Also

OptixBuildInput::customPrimitiveArray

#### 5.8.2 Member Data Documentation

## 5.8.2.1 const CUdeviceptr\* OptixBuildInputCustomPrimitiveArray::aabbBuffers

Points to host array of device pointers to AABBs (type OptixAabb), one per motion step. Host array size must match number of motion keys as set in OptixMotionOptions (or an array of size 1 if OptixMotionOptions::numKeys is set to 1). Each device pointer must be a multiple of OPTIX\_AABB\_BUFFER\_BYTE\_ALIGNMENT.

# 5.8.2.2 const unsigned int\* OptixBuildInputCustomPrimitiveArray::flags

Array of flags, to specify flags per sbt record, combinations of OptixGeometryFlags describing the primitive behavior, size must match numSbtRecords.

## 5.8.2.3 unsigned int OptixBuildInputCustomPrimitiveArray::numPrimitives

Number of primitives in each buffer (i.e., per motion step) in OptixBuildInputCustomPrimitiveArray::aabbBuffers.

# 5.8.2.4 unsigned int OptixBuildInputCustomPrimitiveArray::numSbtRecords

Number of sbt records available to the sbt index offset override.

#### 5.8.2.5 unsigned int OptixBuildInputCustomPrimitiveArray::primitiveIndexOffset

Primitive index bias, applied in optixGetPrimitiveIndex(). Sum of primitiveIndexOffset and number of primitive must not overflow 32bits.

# 5.8.2.6 CUdeviceptr OptixBuildInputCustomPrimitiveArray::sbtIndexOffsetBuffer

Device pointer to per-primitive local sbt index offset buffer. May be NULL. Every entry must be in range [0,numSbtRecords-1]. Size needs to be the number of primitives.

# 5.8.2.7 unsigned int OptixBuildInputCustomPrimitiveArray::sbtIndexOffsetSizeInBytes

Size of type of the sbt index offset. Needs to be 0, 1, 2 or 4 (8, 16 or 32 bit).

#### 5.8.2.8 unsigned int OptixBuildInputCustomPrimitiveArray::sbtIndexOffsetStrideInBytes

Stride between the index offsets. If set to zero, the offsets are assumed to be tightly packed and the stride matches the size of the type (sbtIndexOffsetSizeInBytes).

## 5.8.2.9 unsigned int OptixBuildInputCustomPrimitiveArray::strideInBytes

Stride between AABBs (per motion key). If set to zero, the aabbs are assumed to be tightly packed and the stride is assumed to be sizeof( OptixAabb ). If non-zero, the value must be a multiple of OPTIX\_AABB\_BUFFER\_BYTE\_ALIGNMENT.

# 5.9 OptixBuildInputInstanceArray Struct Reference

#### **Public Attributes**

- CUdeviceptr instances
- · unsigned int numInstances

## 5.9.1 Detailed Description

Instance and instance pointer inputs.

See Also

OptixBuildInput::instanceArray

#### 5.9.2 Member Data Documentation

# 5.9.2.1 CUdeviceptr OptixBuildInputInstanceArray::instances

If OptixBuildInput::type is OPTIX\_BUILD\_INPUT\_TYPE\_INSTANCE\_POINTERS instances and aabbs should be interpreted as arrays of pointers instead of arrays of structs.

This pointer must be a multiple of OPTIX\_INSTANCE\_BYTE\_ALIGNMENT if OptixBuildInput::type is OPTIX\_BUILD\_INPUT\_TYPE\_INSTANCES. The array elements must be a multiple of

OPTIX\_INSTANCE\_BYTE\_ALIGNMENT if OptixBuildInput::type is OPTIX\_BUILD\_INPUT\_TYPE\_INSTANCE\_POINTERS.

# 5.9.2.2 unsigned int OptixBuildInputInstanceArray::numInstances

Number of elements in OptixBuildInputInstanceArray::instances.

# 5.10 OptixBuildInputTriangleArray Struct Reference

# 5.10.1 Detailed Description

Triangle inputs.

See Also

OptixBuildInput::triangleArray

## 5.10.2 Member Data Documentation

## 5.10.2.1 const unsigned int \* OptixBuildInputTriangleArray::flags

Array of flags, to specify flags per sbt record, combinations of OptixGeometryFlags describing the primitive behavior, size must match numSbtRecords.

#### 5.10.2.2 CUdeviceptr OptixBuildInputTriangleArray::indexBuffer

Optional pointer to array of 16 or 32-bit int triplets, one triplet per triangle. The minimum alignment must match the natural alignment of the type as specified in the indexFormat, i.e., for OPTIX\_INDICES\_FORMAT\_UNSIGNED\_INT3 4-byte and for OPTIX\_INDICES\_FORMAT\_UNSIGNED\_SHORT3 a 2-byte alignment.

## 5.10.2.3 OptixIndicesFormat OptixBuildInputTriangleArray::indexFormat

See Also

**OptixIndicesFormat** 

## 5.10.2.4 unsigned int OptixBuildInputTriangleArray::indexStrideInBytes

Stride between triplets of indices. If set to zero, indices are assumed to be tightly packed and stride is inferred from indexFormat.

## 5.10.2.5 unsigned int OptixBuildInputTriangleArray::numIndexTriplets

Size of array in OptixBuildInputTriangleArray::indexBuffer. For build, needs to be zero if indexBuffer is nullptr.

#### 5.10.2.6 unsigned int OptixBuildInputTriangleArray::numSbtRecords

Number of sbt records available to the sbt index offset override.

## 5.10.2.7 unsigned int OptixBuildInputTriangleArray::numVertices

Number of vertices in each of buffer in OptixBuildInputTriangleArray::vertexBuffers.

#### 5.10.2.8 CUdeviceptr OptixBuildInputTriangleArray::preTransform

Optional pointer to array of floats representing a 3x4 row major affine transformation matrix. This pointer must be a multiple of OPTIX\_GEOMETRY\_TRANSFORM\_BYTE\_ALIGNMENT.

## 5.10.2.9 unsigned int OptixBuildInputTriangleArray::primitiveIndexOffset

Primitive index bias, applied in optixGetPrimitiveIndex(). Sum of primitiveIndexOffset and number of triangles must not overflow 32bits.

## 5.10.2.10 CUdeviceptr OptixBuildInputTriangleArray::sbtIndexOffsetBuffer

Device pointer to per-primitive local sbt index offset buffer. May be NULL. Every entry must be in range [0,numSbtRecords-1]. Size needs to be the number of primitives.

## 5.10.2.11 unsigned int OptixBuildInputTriangleArray::sbtIndexOffsetSizeInBytes

Size of type of the sbt index offset. Needs to be 0, 1, 2 or 4 (8, 16 or 32 bit).

## 5.10.2.12 unsigned int OptixBuildInputTriangleArray::sbtIndexOffsetStrideInBytes

Stride between the index offsets. If set to zero, the offsets are assumed to be tightly packed and the stride matches the size of the type (sbtIndexOffsetSizeInBytes).

## 5.10.2.13 OptixTransformFormat OptixBuildInputTriangleArray::transformFormat

See Also

OptixTransformFormat

#### 5.10.2.14 const CUdeviceptr\* OptixBuildInputTriangleArray::vertexBuffers

Points to host array of device pointers, one per motion step. Host array size must match the number of motion keys as set in OptixMotionOptions (or an array of size 1 if OptixMotionOptions::numKeys is set to 0 or 1). Each per motion key device pointer must point to an array of vertices of the triangles in the format as described by vertexFormat. The minimum alignment must match the natural alignment of the type as specified in the vertexFormat, i.e., for OPTIX\_VERTEX\_FORMAT\_FLOATX 4-byte, for all others a 2-byte alignment. However, an 16-byte stride (and buffer alignment) is recommended for vertices of format OPTIX\_VERTEX\_FORMAT\_FLOAT3 for GAS build performance.

## 5.10.2.15 OptixVertexFormat OptixBuildInputTriangleArray::vertexFormat

See Also

**OptixVertexFormat** 

## 5.10.2.16 unsigned int OptixBuildInputTriangleArray::vertexStrideInBytes

Stride between vertices. If set to zero, vertices are assumed to be tightly packed and stride is inferred from vertexFormat.

# 5.11 OptixBuiltinISOptions Struct Reference

#### **Public Attributes**

- OptixPrimitiveType builtinISModuleType
- · int usesMotionBlur

# 5.11.1 Detailed Description

Specifies the options for retrieving an intersection program for a built-in primitive type. The primitive type must not be OPTIX\_PRIMITIVE\_TYPE\_CUSTOM.

See Also

optixBuiltinISModuleGet()

Various parameters used by the denoiser.

See Also

optixDenoiserInvoke()
optixDenoiserComputeIntensity()
optixDenoiserComputeAverageColor()

#### 5.13.2 Member Data Documentation

#### 5.13.2.1 float OptixDenoiserParams::blendFactor

blend factor. If set to 0 the output is 100% of the denoised input. If set to 1, the output is 100% of the unmodified input. Values between 0 and 1 will linearly interpolate between the denoised and unmodified input.

# 5.13.2.2 unsigned int OptixDenoiserParams::denoiseAlpha

if set to nonzero value, denoise alpha channel (if present) in first inputLayer image

## 5.13.2.3 CUdeviceptr OptixDenoiserParams::hdrAverageColor

this parameter is used when the OPTIX\_DENOISER\_MODEL\_KIND\_AOV model kind is set. average log color of input image, separate for RGB channels (default null pointer). points to three floats. with the default (null pointer) denoised results will not be optimal.

## 5.13.2.4 CUdeviceptr OptixDenoiserParams::hdrIntensity

average log intensity of input image (default null pointer). points to a single float. with the default (null pointer) denoised results will not be optimal for very dark or bright input images.

Any combination of OptixInstanceFlags is allowed.

## 5.18.2.2 unsigned int OptixInstance::instanceId

Application supplied ID. The maximal ID can be queried using OPTIX\_DEVICE\_PROPERTY\_LIMIT\_MAX\_INSTANCE\_ID.

## 5.18.2.3 unsigned int OptixInstance::pad[2]

round up to 80-byte, to ensure 16-byte alignment

## 5.18.2.4 unsigned int OptixInstance::sbtOffset

SBT record offset. Will only be used for instances of geometry acceleration structure (GAS) objects. Needs to be set to 0 for instances of instance acceleration structure (IAS) objects. The maximal SBT offset can be queried using OPTIX\_DEVICE\_PROPERTY\_LIMIT\_MAX\_INSTANCE\_SBT\_OFFSET.

#### 5.18.2.5 float OptixInstance::transform[12]

affine object-to-world transformation as 3x4 matrix in row-major layout

## 5.18.2.6 OptixTraversableHandle OptixInstance::traversableHandle

Set with an OptixTraversableHandle.

## 5.18.2.7 unsigned int OptixInstance::visibilityMask

Visibility mask. If rayMask & instanceMask == 0 the instance is culled. The number of available bits can be queried using OPTIX\_DEVICE\_PROPERTY\_LIMIT\_NUM\_BITS\_INSTANCE\_VISIBILITY\_MASK.

## 5.19 OptixMatrixMotionTransform Struct Reference

#### **Public Attributes**

- OptixTraversableHandle child
- · OptixMotionOptions motionOptions
- unsigned int pad [3]
- float transform [2][12]

## 5.19.1 Detailed Description

Represents a matrix motion transformation.

The device address of instances of this type must be a multiple of OPTIX\_TRANSFORM\_BYTE\_ALIGNMENT.

This struct, as defined here, handles only N=2 motion keys due to the fixed array length of its transform member. The following example shows how to create instances for an arbitrary number N of motion keys:

```
float matrixData[N][12];
... // setup matrixData
```

#### 5.19.2 Member Data Documentation

## 5.19.2.1 OptixTraversableHandle OptixMatrixMotionTransform::child

The traversable that is transformed by this transformation.

#### 5.19.2.2 OptixMotionOptions OptixMatrixMotionTransform::motionOptions

The motion options for this transformation.

#### 5.19.2.3 unsigned int OptixMatrixMotionTransform::pad[3]

Padding to make the transformation 16 byte aligned.

## 5.19.2.4 float OptixMatrixMotionTransform::transform[2][12]

Affine object-to-world transformation as 3x4 matrix in row-major layout.

# 5.20 OptixModuleCompileBoundValueEntry Struct Reference

#### **Public Attributes**

- size\_t pipelineParamOffsetInBytes
- size\_t sizeInBytes
- const void \* boundValuePtr
- · const char \* annotation

#### 5.20.1 Detailed Description

Struct for specifying specializations for pipelineParams as specified in OptixPipelineCompileOptions::pipelineLaunchParamsVariableName.

The bound values are supposed to represent a constant value in the pipelineParams. OptiX will attempt to locate all loads from the pipelineParams and correlate them to the appropriate bound value, but there are cases where OptiX cannot safely or reliably do this. For example if the pointer to the pipelineParams is passed as an argument to a non-inline function or the offset of the load to the pipelineParams cannot be statically determined (e.g. accessed in a loop). No module should rely on the value being specialized in order to work correctly. The values in the pipelineParams specified on optixLaunch should match the bound value. If validation mode is enabled on the context, OptiX will verify that the bound values specified matches the values in pipelineParams specified to optixLaunch.

These values are compiled in to the module as constants. Once the constants are inserted into the code, an optimization pass will be run that will attempt to propagate the consants and remove unreachable code.

If caching is enabled, changes in these values will result in newly compiled modules.

The pipelineParamOffset and sizeInBytes must be within the bounds of the pipelineParams variable. OPTIX ERROR INVALID VALUE will be returned from optixModuleCreateFromPTX otherwise.

If more than one bound value overlaps or the size of a bound value is equal to 0, an OPTIX\_ERROR\_INVALID\_VALUE will be returned from optixModuleCreateFromPTX.

The same set of bound values do not need to be used for all modules in a pipeline, but overlapping values between modules must have the same value. OPTIX\_ERROR\_INVALID\_VALUE will be returned from optixPipelineCreate otherwise.

# 5.22.2.1 unsigned short OptixMotionOptions::flags

Combinations of OptixMotionFlags.

## 5.22.2.2 unsigned short OptixMotionOptions::numKeys

If numKeys > 1, motion is enabled. timeBegin, timeEnd and flags are all ignored when motion is disabled.

## 5.22.2.3 float OptixMotionOptions::timeBegin

Point in time where motion starts.

# 5.22.2.4 float OptixMotionOptions::timeEnd

Point in time where motion ends.

# 5.23 OptixPipelineCompileOptions Struct Reference

## **Public Attributes**

- · int usesMotionBlur
- · unsigned int traversableGraphFlags
- · int numPayloadValues
- int numAttributeValues
- · unsigned int exceptionFlags
- const char \* pipelineLaunchParamsVariableName
- unsigned int usesPrimitiveTypeFlags

# 5.23.1 Detailed Description

Compilation options for all modules of a pipeline.

Similar to OptixModuleCompileOptions, but these options here need to be equal for all modules of a pipeline.

#### See Also

optixModuleCreateFromPTX(), optixPipelineCreate()

#### 5.23.2 Member Data Documentation

#### 5.23.2.1 unsigned int OptixPipelineCompileOptions::exceptionFlags

A bitmask of OptixExceptionFlags indicating which exceptions are enabled.

#### 5.23.2.2 int OptixPipelineCompileOptions::numAttributeValues

How much storage, in 32b words, to make available for the attributes. The minimum number is 2. Values below that will automatically be changed to 2. [2..8].

#### 5.23.2.3 int OptixPipelineCompileOptions::numPayloadValues

How much storage, in 32b words, to make available for the payload, [0..8].

#### 5.23.2.4 const char\* OptixPipelineCompileOptions::pipelineLaunchParamsVariableName

The name of the pipeline parameter variable. If 0, no pipeline parameter will be available. This will be ignored if the launch param variable was optimized out or was not found in the modules linked to the pipeline.

#### 5.23.2.5 unsigned int OptixPipelineCompileOptions::traversableGraphFlags

Traversable graph bitfield. See OptixTraversableGraphFlags.

## 5.23.2.6 int OptixPipelineCompileOptions::usesMotionBlur

Boolean value indicating whether motion blur could be used.

## 5.23.2.7 unsigned int OptixPipelineCompileOptions::usesPrimitiveTypeFlags

Bit field enabling primitive types. See OptixPrimitiveTypeFlags. Setting to zero corresponds to enabling OPTIX\_PRIMITIVE\_TYPE\_FLAGS\_CUSTOM and OPTIX\_PRIMITIVE\_TYPE\_FLAGS\_TRIANGLE.

- float tz

# 5.31.1 Detailed Description

Represents an SRT transformation.

An SRT transformation can represent a smooth rotation with fewer motion keys than a matrix transformation. Each motion key is constructed from elements taken from a matrix S, a quaternion R, and a translation T.

The scaling matrix S = [0 sy c pvy] defines an affine transformation that can include scale, shear, and a [0 0 sz pvz]

translation. The translation allows to define the pivot point for the subsequent rotation.

The quaternion R = [qx, qy, qz, qw] describes a rotation with angular component qw = cos(theta/2) and other components [qx, qy, qz] = sin(theta/2) \* [ax, ay, az] where the axis [ax, ay, az] is normalized.

The translation  $T = [0 \ 1 \ 0 \ ty]$  defines another translation that is applied after the rotation. Typically, this  $[0 \ 0 \ 1 \ tz]$ 

translation includes the inverse translation from the matrix S to reverse its effect.

To obtain the effective transformation at time t, the elements of the components of S, R, and T will be interpolated linearly. The components are then multiplied to obtain the combined transformation C = T \* R \* S. The transformation C is the effective object-to-world transformations at time t, and  $C^{\wedge}(-1)$  is the effective world-to-object transformation at time t.

### 6.7.1 Detailed Description

OptiX public API header.

Author

NVIDIA Corporation OptiX types include file – defines types and enums used by the API. For the math library routines include optix\_math.h

## 6.8 optix\_denoiser\_tiling.h File Reference

### **Classes**

struct OptixUtilDenoiserImageTile

### **Functions**

- unsigned int optixUtilGetPixelStride (const OptixImage2D &image)
- OptixResult optixUtilDenoiserSplitImage (const OptixImage2D &input, const OptixImage2D &output, unsigned int overlapWindowSizeInPixels, unsigned int tileWidth, unsigned int tileHeight, std::vector< OptixUtilDenoiserImageTile > &tiles)
- OptixResult optixUtilDenoiserInvokeTiled (OptixDenoiser &denoiser, CUstream stream, const OptixDenoiserParams \*params, CUdeviceptr denoiserState, size\_t denoiserStateSizeInBytes, const OptixImage2D \*inputLayers, unsigned int numInputLayers, const OptixImage2D \*outputLayer, CUdeviceptr scratch, size\_t scratchSizeInBytes, unsigned int overlapWindowSizeInPixels, unsigned int tileWidth, unsigned int tileHeight)

### 6.8.1 Detailed Description

OptiX public API header.

Author

**NVIDIA** Corporation

# 6.9 optix\_device.h File Reference

# 6.9.1 Detailed Description

OptiX public API.

Author

NVIDIA Corporation OptiX public API Reference - Host/Device side

# 6.10 optix\_function\_table.h File Reference

### Classes

• struct OptixFunctionTable

### **Macros**

#define OPTIX\_ABI\_VERSION 41

# **Typedefs**

• typedef struct OptixFunctionTable OptixFunctionTable

# 6.10.1 Detailed Description

OptiX public API header.

Author

**NVIDIA** Corporation

# 6.10.2 Macro Definition Documentation

## 6.10.2.1 #define OPTIX\_ABI\_VERSION 41

The OptiX ABI version.

# 6.11 optix\_function\_table\_definition.h File Reference

#### **Variables**

OptixFunctionTable g\_optixFunctionTable

### 6.11.1 Detailed Description

OptiX public API header.

Author

**NVIDIA** Corporation

# 6.12 optix\_host.h File Reference

## 6.12.1 Detailed Description

OptiX public API.

Author

NVIDIA Corporation OptiX public API Reference - Host side

## 6.13 optix\_stack\_size.h File Reference

#### **Functions**

- OptixResult optixUtilAccumulateStackSizes (OptixProgramGroup programGroup, OptixStackSizes \*stackSizes)
- OptixResult optixUtilComputeStackSizes (const OptixStackSizes \*stackSizes, unsigned int maxTraceDepth, unsigned int maxCCDepth, unsigned int maxDCDepth, unsigned int \*directCallableStackSizeFromTraversal, unsigned int \*directCallableStackSizeFromState, unsigned int \*continuationStackSize)
- OptixResult optixUtilComputeStackSizesDCSplit (const OptixStackSizes \*stackSizes, unsigned int dssDCFromTraversal, unsigned int dssDCFromState, unsigned int maxTraceDepth, unsigned int maxDCDepthFromTraversal, unsigned int maxDCDepthFromState, unsigned int \*directCallableStackSizeFromTraversal, unsigned int \*directCallableStackSizeFromState, unsigned int \*continuationStackSize)
- OptixResult optixUtilComputeStackSizesCssCCTree (const OptixStackSizes \*stackSizes, unsigned int cssCCTree, unsigned int maxTraceDepth, unsigned int maxDCDepth, unsigned int \*directCallableStackSizeFromTraversal, unsigned int \*directCallableStackSizeFromState, unsigned int \*continuationStackSize)
- OptixResult optixUtilComputeStackSizesSimplePathTracer (OptixProgramGroup programGroupRG, OptixProgramGroup programGroupMS1, const OptixProgramGroup \*programGroupCH1, unsigned int programGroupCH1Count, OptixProgramGroup

programGroupMS2, const OptixProgramGroup \*programGroupCH2, unsigned int programGroupCH2Count, unsigned int \*directCallableStackSizeFromTraversal, unsigned int \*directCallableStackSizeFromState, unsigned int \*continuationStackSize)

# 6.13.1 Detailed Description

OptiX public API header.

Author

**NVIDIA** Corporation

## 6.14 optix\_stubs.h File Reference

#### **Macros**

#define WIN32\_LEAN\_AND\_MEAN 1

### **Functions**

- static void \* optixLoadWindowsDllFromName (const char \*optixDllName)
- static void \* optixLoadWindowsDII ()
- OptixResult optixInitWithHandle (void \*\*handlePtr)
- OptixResult optixInit (void)
- OptixResult optixUninitWithHandle (void \*handle)

### **Variables**

OptixFunctionTable g\_optixFunctionTable

## 6.14.1 Detailed Description

OptiX public API header.

**Author** 

**NVIDIA** Corporation

- 6.14.2 Macro Definition Documentation
- 6.14.2.1 #define WIN32 LEAN AND MEAN 1
- 6.14.3 Function Documentation
- 6.14.3.1 static void\* optixLoadWindowsDII() [static]
- 6.14.3.2 static void\* optixLoadWindowsDIIFromName (

# const char \* optixDllName ) [static]

# 6.15 optix\_types.h File Reference

### **Macros**

- #define \_\_OPTIX\_INCLUDE\_INTERNAL\_HEADERS\_\_
- #define \_\_UNDEF\_OPTIX\_INCLUDE\_INTERNAL\_HEADERS\_OPTIX\_TYPES\_H\_\_

## 6.15.1 Detailed Description

OptiX public API header.

Author

**NVIDIA** Corporation

## 6.15.2 Macro Definition Documentation

- 6.15.2.1 #define \_\_OPTIX\_INCLUDE\_INTERNAL\_HEADERS\_\_
- 6.15.2.2 #define \_\_UNDEF\_OPTIX\_INCLUDE\_INTERNAL\_HEADERS\_OPTIX\_TYPES\_H\_\_
